

Supplementary Data:

Figure S1. Construct design. A. Schematic diagram of repressor and promoter elements and spacing measurements. B. Upper strands of 89.5-bp DNA loop constructs are shown with reference positions underlined in top case. Promoter and operator elements are color-coded as in A. Single operator control cases are indicated by shading.

Figure S2. Construct design. A. Schematic diagram of repressor and promoter elements and spacing measurements. B. Upper strands of 100.5-bp DNA loop constructs are shown with reference positions underlined in top case. Promoter and operator elements are color-coded as in A. Single operator control cases are indicated by shading.

(a) Indicates distance in bp from center of O1 to center of UV5 promoter.

(b) Each single operator was based on 48 bp center O1 to center UV5 construct.

(c) Indicates spacing in bp from center of functional operator to center of dead operator.
