

SUPPLEMENTARY FIG. S2. Mouse Htt mRNA reduction after intrastriatal injection of AAV2/1-miRNA-Htt into YAC128 mice. Shown is a quantitative PCR analysis evaluating endogenous mouse Htt mRNA levels in the striatum 1 and 5 months after injection of AAV2/1-miRNA-Htt or AAV2/1-null control vector. PPIA served as a normalization control gene. Values are given as means \pm SEM. * $p < 0.05$, ** $p < 0.01$.
