

Jun et al. Supplemental Figure 3

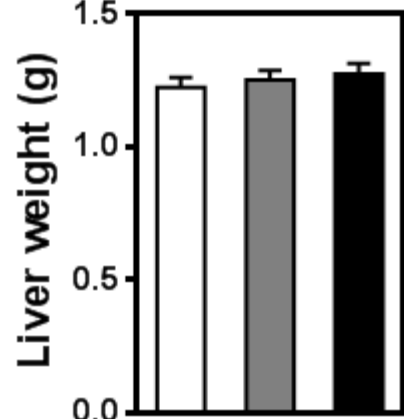

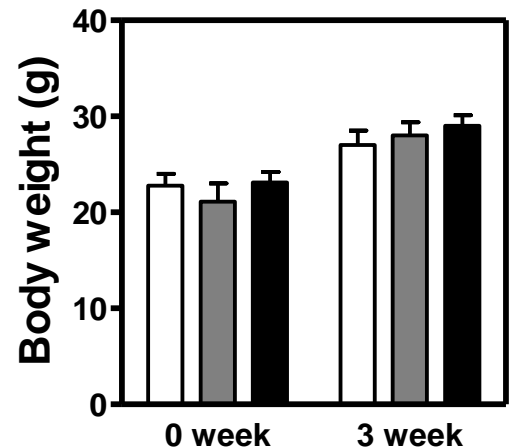

A C57BL/6J mice

B ApoE2 mice

C PPARα-deficient mice

Supplemental Fig. 3. Body and liver weights of C57BL/6J (A), apoE2 (B), and PPARα-deficient mice (C). Western diet-fed mice were orally administered with vehicle, linalool (100 mg/kg body weight/day) or fenofibrate (100 mg/kg body weight/day) for 3 weeks. Body weight was measured at 0 and 3 weeks. After the feeding period, mice were sacrificed and liver weight was determined. Data represent means ± SE. *P < 0.05 versus the control group.
