

Supplemental Data

Figure S2 Isoform specificity of R58 antibody

Synthetic peptides derived from the indicated sequences of TGF- β 1-3 LAP (refer to Figure S1) were incubated with/without PLK or PLN for 45 min at 37°C, and thereafter samples were spotted onto a nitrocellulose membrane followed by dot blot analyses using R58 antibody. *Lanes 1*, TGF- β 1 LAP peptide; *lanes 2*, TGF- β 2 LAP peptide; *lanes 3*, TGF- β 3 LAP peptide. *Column 1*, undigested peptides; *column 2*, PLK-digested peptides; *column 3*, PLN-digested peptides. Representative results from three independent experiments with a similar result are shown.
