Fig. S1

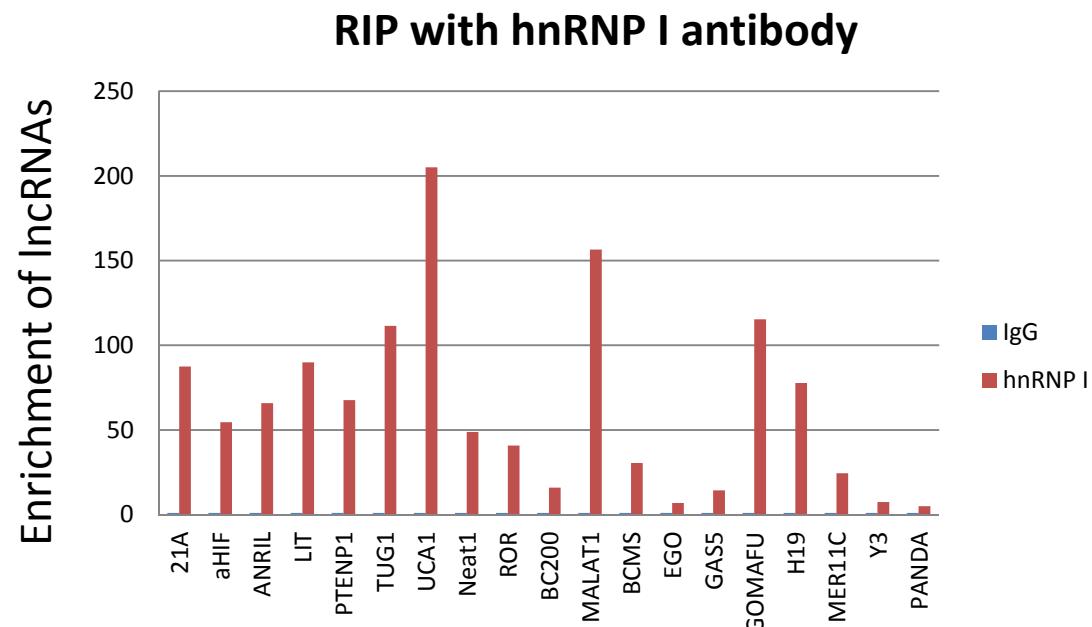

Fig.S1 Preliminary screen for lncRNA by RNA immunoprecipitation assays with hnRNP I antibody. Values are averages of two experiments.

Fig. S2

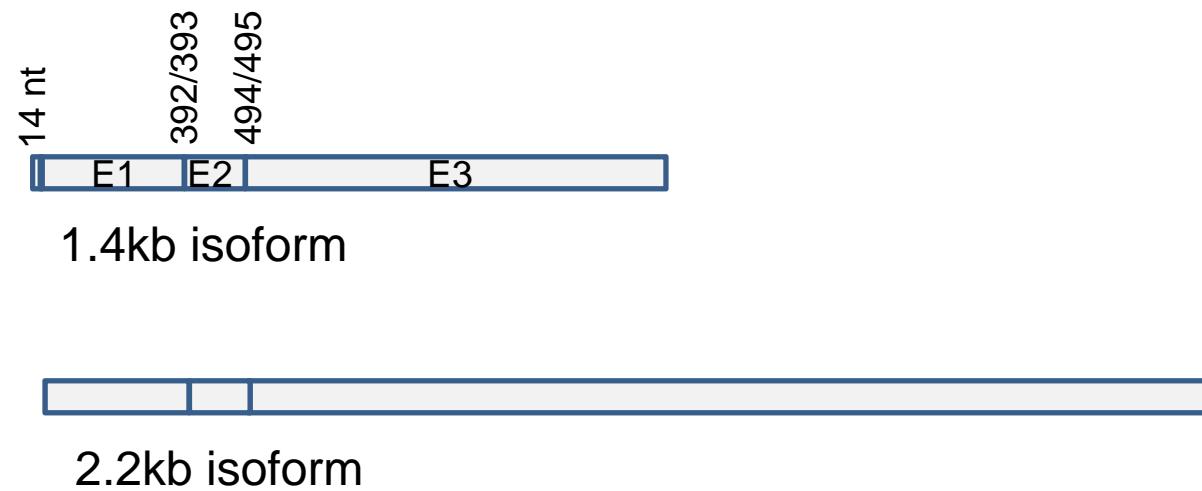

Fig. S2 Two isoforms of UCA1 based on literature reports. The 1.4 kb isoform is included in the 2.2 kb isoform.

Fig. S3

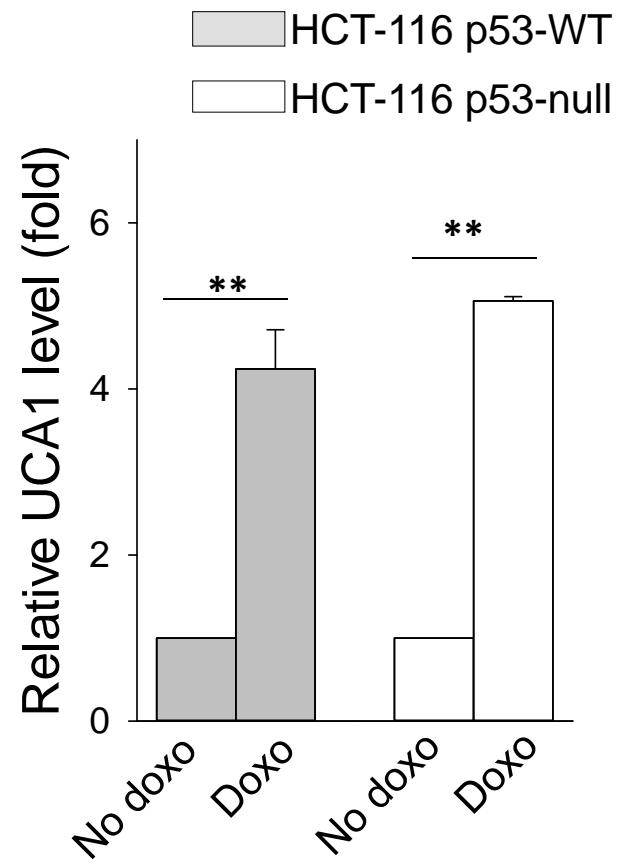

Fig. S3 Induction of UCA1 by doxo independent of p53. Cells were treated with doxo at 1 µg/ml for 24 h before they were harvested for RNA extraction.

Fig. S4

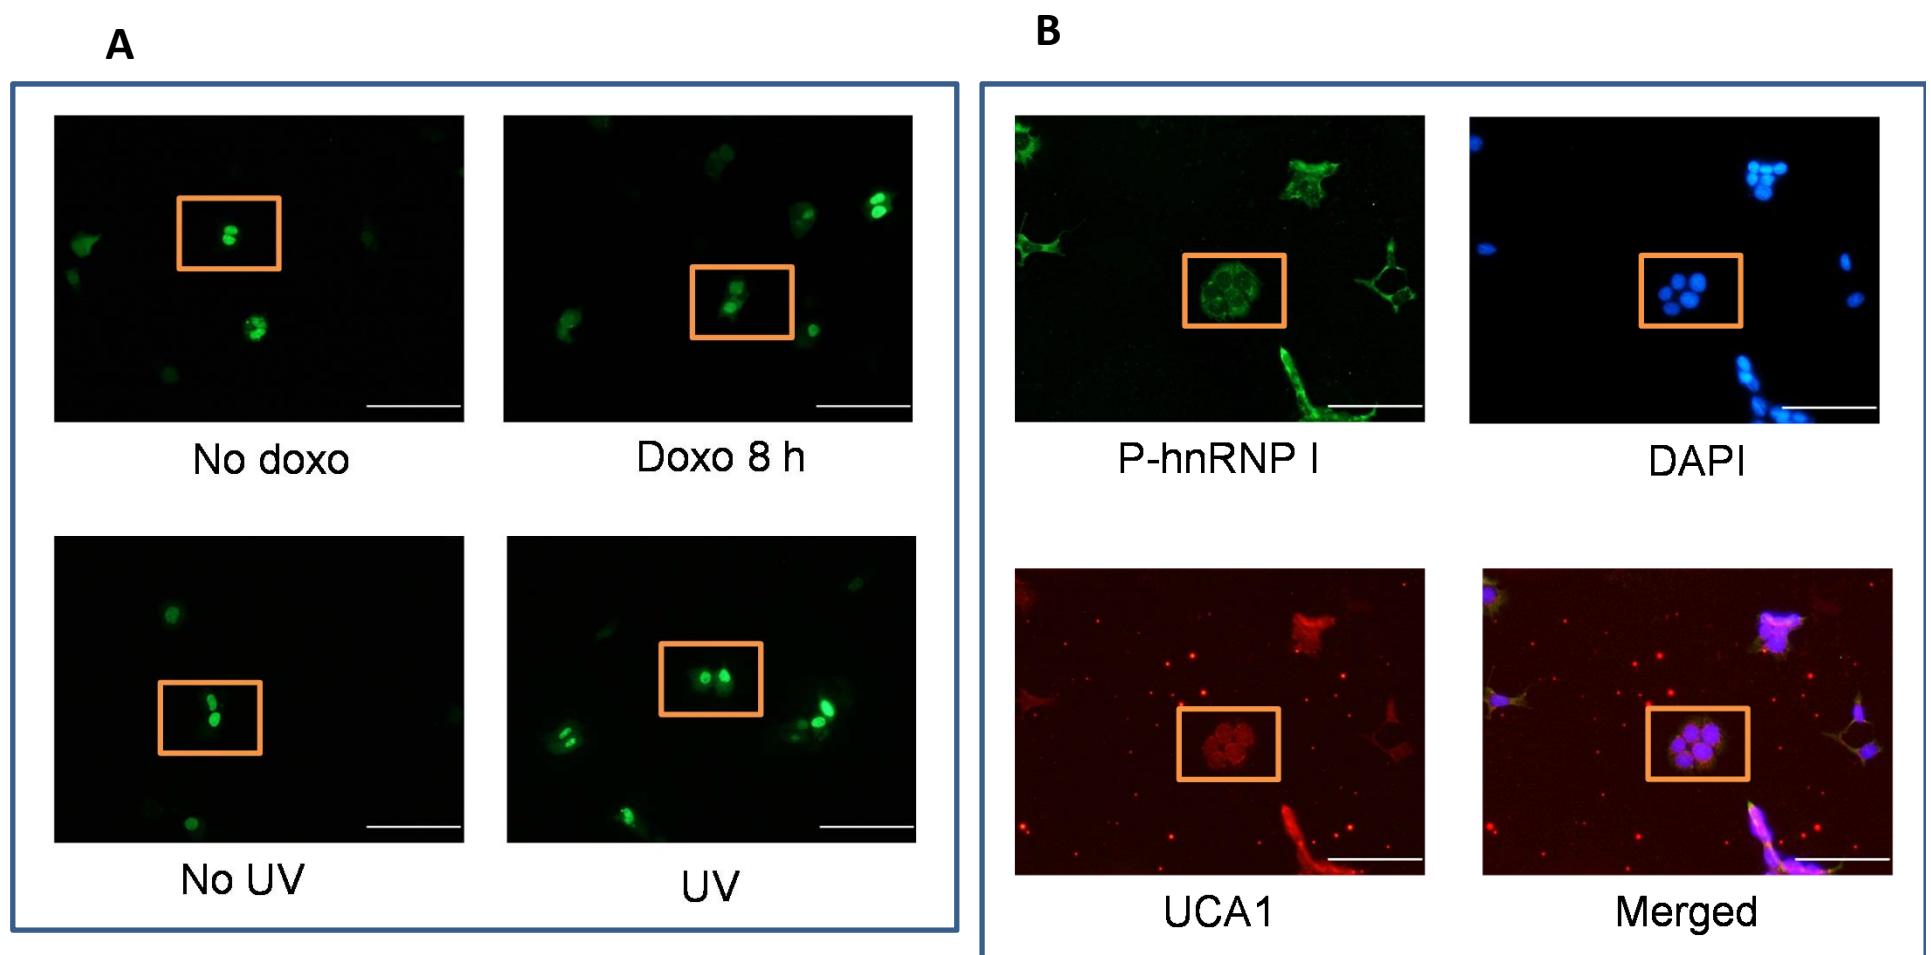

Fig. S4 Detection of the redistribution of hnRNP I-GFP after doxo or UV treatment (A); and p-hnRNP I and UCA1 by IF and FISH, respectively (B). Boxed areas were cropped out for Fig. 3D and 3E used in text, respectively. Scale bars represent 50 μ m.

Fig. S5

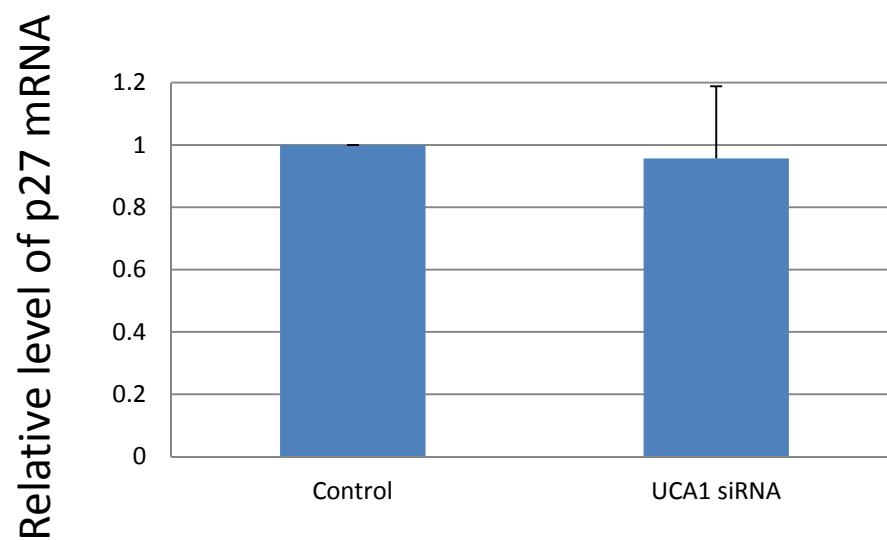

Fig. S5 UCA1 has no effect on p27 mRNA level
as detected by RT-PCR

Fig. S6

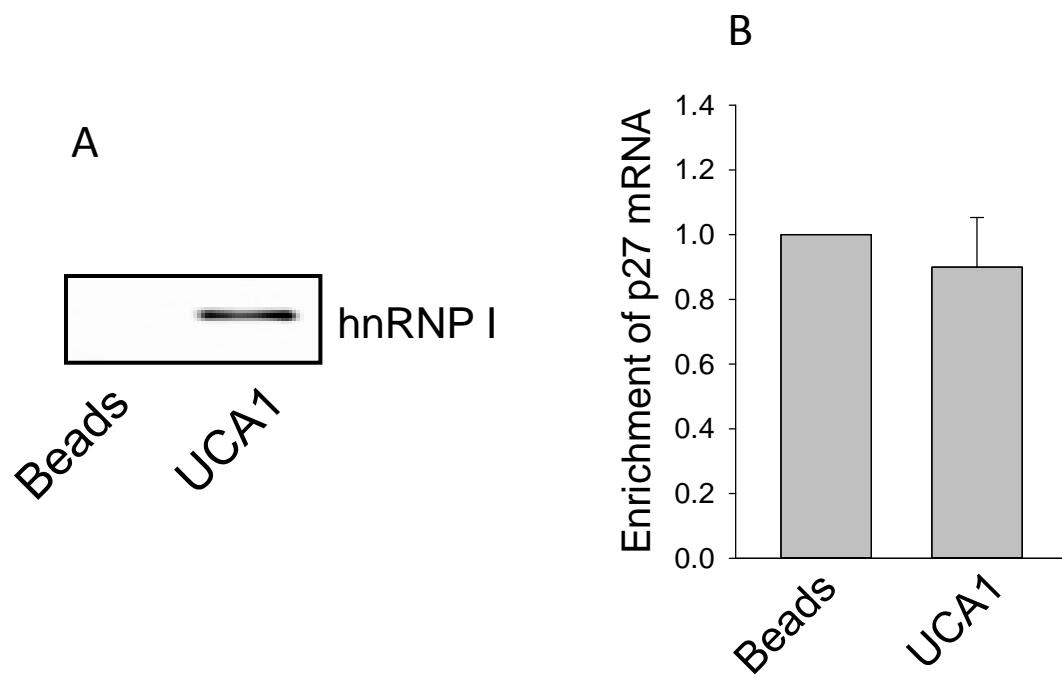

Fig. S6 UCA1 and p27 mRNA are not in the same hnRNP I complex. After RNA precipitation with UCA1 probe, the pellet was used for western to detect hnRNP I (A) or qRT-PCR to detect p27 mRNA (B).

Fig. S7

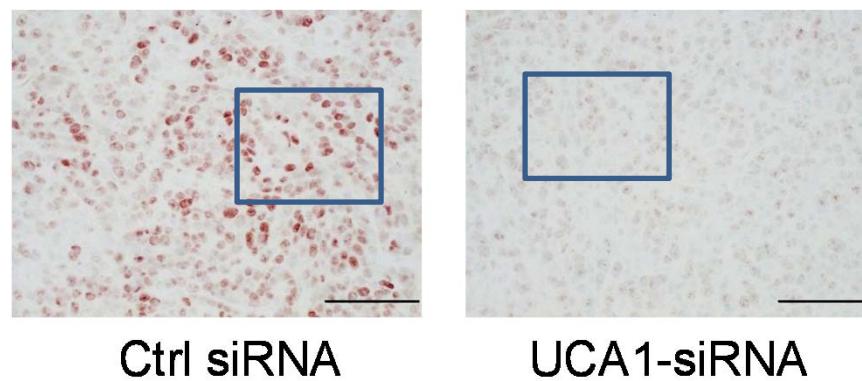

Fig. S7 Detection of Ki-67 in xenografted tumor samples by IHC. Boxed areas were cropped out for Fig. 5E used in text. Scale bars represent 50 μ m.

Fig. S8

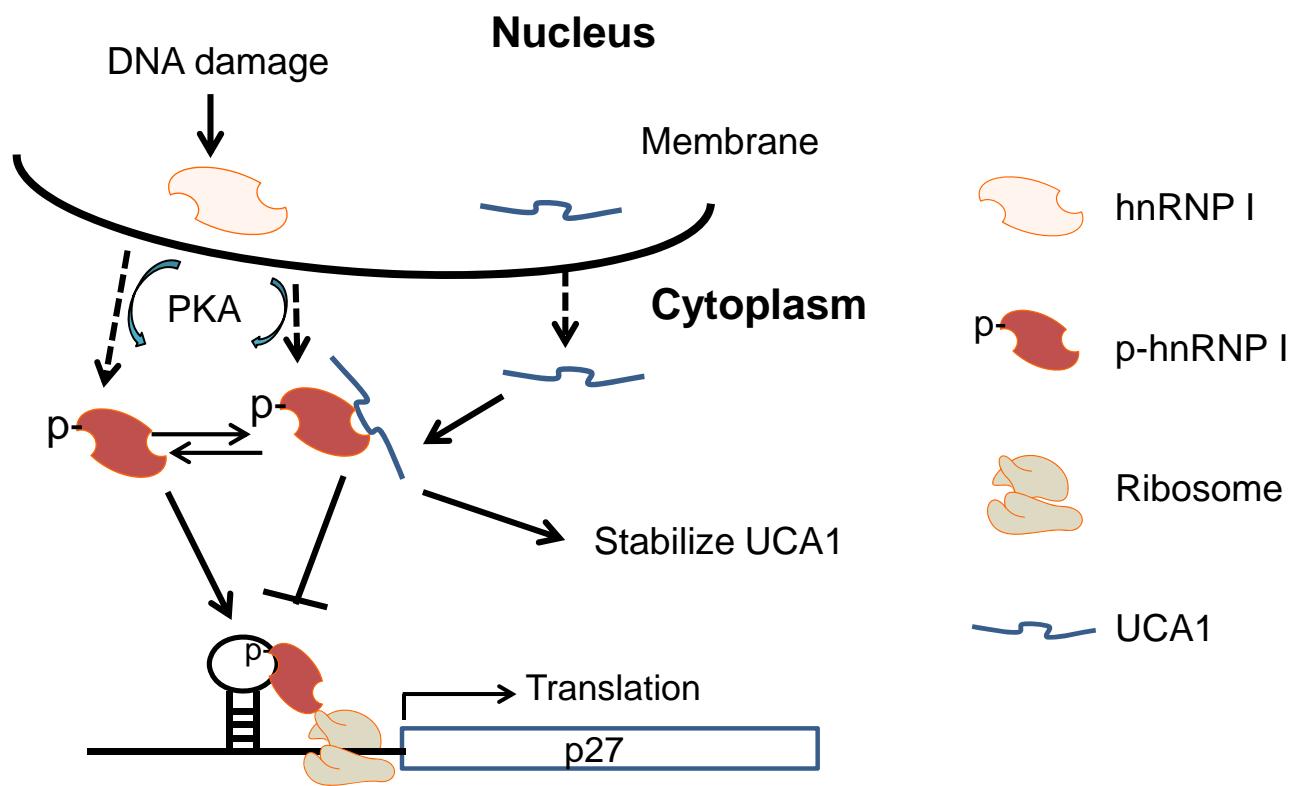

Fig. S8 A working model to explain how UCA1 suppresses p27 translation through hnRNP I.
