

Supplementary information, Figure S6 Evaluation of the sensitivity and specificity of AS-PCR assay for *BRAF(V600E)* mutation detection. gDNA containing no *BRAF(V600E)* mutation or 0.1% of this mutation was used as a template for AS-PCR to assess the sensitivity and specificity of the assay. Different amounts of template DNA (as low as 2.5 ng) were examined. Arrow indicates the expected PCR products.
