

SUPPLEMENTARY FIG. S4. Graphs for two additional NP tests and one psychological measure. There was no significant trend over time for the NP tests. (A) FAS Test ($p = .087$) and (B) Digital Span, Forwards and Backwards, Total ($p = .119$). There was a trend toward significant improvement on the psychological measure for depression (BDI) at 1 week post—the 18th LED treatment vs. pre-LED ($p = .045$) (C).
