

Supplemental Information for:

**Effects of Cations on Protein and Peptide Charging in Electrospray Ionization from  
Aqueous Solutions**

Anna C. Susa, Daniel N. Mortensen and Evan R. Williams\*

*Department of Chemistry, University of California, Berkeley, California 94720-1460*

Submitted to the *Journal of the American Society for Mass Spectrometry*

October 28, 2013

**Supplemental Figure 1**

CD spectra of 50  $\mu$ M (a) SubPOH, (b) SubPNH<sub>2</sub>, and (c) SubPOMe in water (blue dashed line), 25 mM sodium acetate (purple dotted line) and 25 mM ammonium acetate (red dashed line).

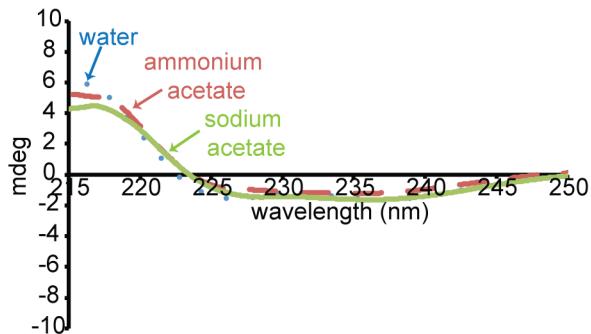

**Supplemental Figure 2**

CD spectra of 25  $\mu\text{M}$   $\beta$ -lactoglobulin in water (blue dashed line), 25 mM sodium acetate (purple dotted line) and 25 mM ammonium acetate (red dashed line).

**Supplemental Figure 3**

CD spectra of 25  $\mu\text{M}$  lysozyme in water (purple dotted line), 25 mM sodium acetate (red dashed line) and 25 mM ammonium acetate (blue dashed line).

**Supplemental Figure 4**

CD spectra of 25  $\mu\text{M}$  angiotensin II in water (blue dotted line), 25 mM ammonium acetate (red dashed line) and 25 mM sodium acetate (green line).
