

**Supplementary Figure S5. Subpopulations of p300 are retained on mitotic chromatin.** Fixed Jurkat cells were doubly labeled with  $\alpha$ -nuclear mitotic apparatus protein (NuMA) (as detected with Alexa Fluor® 594 anti-mouse antibody, red) and  $\alpha$ -p300 (as detected with Alexa Fluor® 488 anti-rabbit antibody, green) antibodies. The arrow indicates the presence of p300 in chromatin of a mitotic cell.
