

strain *Pst* DC3000 and avirulent strain *Pst* DC3000 (*avrRpt2*) (all pathogen suspensions are  $2 \times 10^7$  cfu/mL). Leaf samples were collected for lipid profiling 24 h post inoculation. Values are means  $\pm$  SE (n = 5). Different letters indicate sample groups with significant differences (P < 0.05) from each other.

(A) LPC species from Col-0, *pldβ1-1*, and *pldβ1* complementation (COM) plants under different treatments.

(B) LPE species from Col-0, *pldβ1-1*, and *pldβ1* complementation (COM) plants under different treatments.

(B) LPG species from Col-0, *pldβ1-1*, and *pldβ1* complementation (COM) plants under different treatments.

**Supplemental data Table S1. Real time PCR primers**
