Supplemental Figure S1. Allele-specific binding of EGR-1 to the -347C/A polymorphism in the *TPH1* core promoter. EMSA analysis using nuclear extract (NE*) from BON cells stimulated with TPA (1 h, 200 nM). Binding reactions were performed with allele-specific probes (-347C and -347A) and included antibodies (Ab) against SP1, SP3, ZBP-89, or GATA1. Open arrow: allele-specific binding.
