

1 **Table S6:** Table presents each species used in analysis with its taxonomic information, trait data, mean annual percent leaf tissue
 2 consumed, and sources of data. Woodiness traits include: woody (W) and non-woody (NW). Plant growth forms include: forb
 3 (F), shrub (S), tree (T), vine (V), and graminoid (G). Life-history traits include: annual (A), intermediate (I), and perennial (P).
 4 ‘Other angiosperms’ represent a paraphyletic group of species that were not contained within monophyletic angiosperm lineages
 5 and include basal angiosperms, basal eudicots, and basal coreeudicots. Bibliography is found below the table.
