

**Table S1** A list of primers used in the study

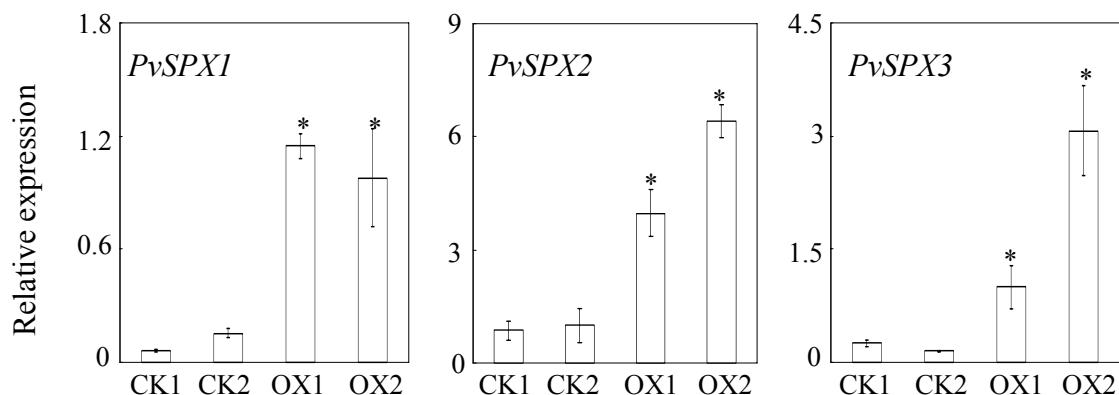

Gene	Forward primer (5'-3')	Reverse primer (5'-3')
<i>T3</i>	ATTAACCCTCACTAAAGGG	
<i>T7</i>	TAATACGACTCACTATAGGG	
<i>PvSPX2-5'</i>	GGAAGAATGACGTTGAGA	
<i>PvSPX3-5'</i>	CAGCCCTTCTATGAAATTGA	
<i>PvSPX3-3'</i>	GCAGTGCTGATAAAAGTTAGT	
<i>PvSPX2C</i>	ATGAAATTCGGAAAGAGCCTCA	CAGGTTACTTGGCTGCTTGT
<i>PvSPX3C</i>	ACATGAAGTTGAGAAGATCCT	AGCCTAGTTATGCTGAGAAG
<i>OX-PvSPX1</i>	GGATCCTATGAAATT CGG	ACCGTTACTTGGCTGCTGTTCC
<i>RNAi-PvSPX1(1)</i>	GGATCCGACCTGCTCTACAAACTTGT	AAGCTTATCTGCAGCGGTGGC
<i>RNAi-PvSPX1 (2)</i>	CTGCAGATCTGCAGCGGTGG	ACCGGTGACCTGCTCTACAAACTTG
<i>OX-PvSPX2</i>	GGATCCTATGAAATT CGG	ACCGTTACTTGGCTGCTTGT
<i>OX-PvSPX3</i>	GGATCCTATGAAGTTGAGAAG	ACCGTCTAGTTATGCTGAGAAG
<i>OX-PvPHR1</i>	GGATCCTATGTATCATTCAAAGAAT	ACCGTTCACAGATTACTGC
<i>EF-1<math>\alpha</math></i>	TGAACCACCCCTGGTCAGATT	TCCAGCATCACCATTCTCA
<i>PvSPX1-RT</i>	GGCAACTCCCCAAGCTGAG	AAACCACCCATCTGCAGCG
<i>PvSPX2-RT</i>	TGAGATTGAGTACGTGGAGAGC	CAGGTTACTTGGCTGCTTGT
<i>PvSPX3-RT</i>	GCACCAGAGATAGCAACCT	CACACCCACCTACCACATACA
<i>PvPDR2-RT</i>	CTTCTGAATGCATTTCTCCAACTC	GACGAATTATGTCAGTGGTAGGAGC
<i>PvLPRI-RT</i>	GTAACAACCAACGAGATCCTG	GGAATCCGTGACGTGTCA
<i>Pv4-RT</i>	GAATGTATAATAAGTTGAAAGATTGCT	ACACCCACATGAACACAACATGGC
<i>PvPHT1-RT</i>	GCAGTAACCTGGTTTTGTTG	ACATCACAACAAACCCAATTCTG
<i>PvPHT2-RT</i>	GGAATAGTTGCAGGGCTAATG	CATCTACACTGGATCTGACTAGG
<i>PvPHR1-RT</i>	TACGGTGGACACATGAATTACAC	TCTGCACCTCCAATTGTTCA
<i>PvSPX1GFP</i>	TCTAGATATGAAATT CGGAAAGAGTC	GGATCCCGCTGGCTGCTGTTCCAG
<i>PvSPX2GFP</i>	TCTAGAGATGAAATT CGGAAAGAGCC	GGATCCAGCTGGCTGCTTGT
<i>PvSPX3GFP</i>	TCTAGACATGAAGTTGAGAAGATCC	GGATCCC GTTATGCTGAGAAG
<i>PvPAP1-RT</i>	GCTTCCTTGT CCTCTTGGT	TGTAACTGTGCCTCTAAACTGG
<i>PvPAP2-RT</i>	GAGTAATGGAGGCAAAGCAGCAAC	CATTGCCCTCCCCACAAGGT CAC
<i>PvPAP3-RT</i>	GAACGCTTGGTATTCCGTGT	TGTCTCCCCAATCTCCAAC
<i>PvPAP4-RT</i>	GGTGTATGGTGGCTTCATTGGTG	GCAGAAACTCAGATTGGTTGAGG
<i>PvPAP5-RT</i>	GGAGGGGAGTTGTTGGTCAC	ACCCTGCTCCGCTAGTCAAG
<i>PvPS2:I-RT</i>	GCCCAAGTTGAGGCTGATA	GAAGGGAGAATTGTGCTCCA

**Table S2** Effects of phosphorus availability on bean growth

Days after Treatment (d)	Fresh weight (g. plant <sup>-1</sup> )				Total root length (m. plant <sup>-1</sup> )				Total P content (mg. plant <sup>-1</sup> )			
	Shoots		Roots		-P		+P		Shoots		Roots	
	-P	+P	-P	+P	-P	+P	-P	+P	-P	+P	-P	+P
4	16.58 (1.02)	18.67 (0.96)	5.38 (0.54)	7.41 (0.21)*	11.16 (0.93)	18.45 (1.67)*	2.02 (0.06)	2.43 (0.59)	27.43 (1.47)	43.07 (3.48)*		
8	24.51 (1.03)	31.71 (1.22)*	10.51 (0.15)	15.33 (0.41)*	11.93 (0.38)	27.05 (2.56)*	2.63 (0.35)	3.89 (0.42)*	55.66 (4.58)	80.45 (1.83)*		

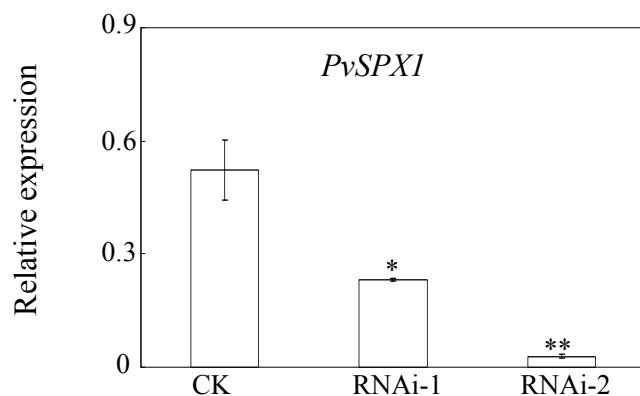

Seedlings were hydroponically grown under normal conditions for 7 d, and then treated with Pi starvation. Shoots and roots were separately harvested for further analysis at indicated time. Data is the mean of four replicates with standard error in parenthesis. Asterisks represent significant differences of the same trait between two P treatments at 0.05 levels.

**Fig. S1**

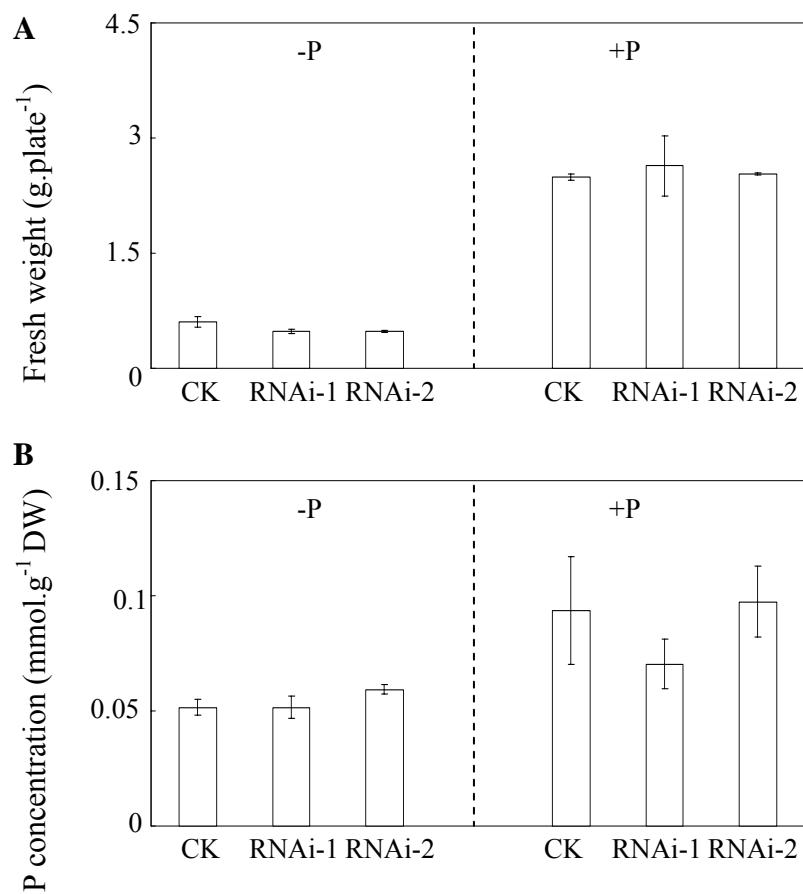

**Fig. S1** Expression of *PvSPX*s in transgenic bean hairy roots. Expression levels of *PvSPX*s were determined in bean hairy roots grown in MS medium containing 1.25 mM phosphorus by qPCR. Expression levels of the tested genes were quantified relative to expression levels of the reference gene *EF-1 $\alpha$*  (*PvTC3216*) using arbitrary units. OX1 and OX2 indicate two transgenic bean hairy root lines with overexpressing *PvSPX1*, *PvSPX2* or *PvSPX3*. CK1 and 2 indicate the two transgenic lines transformed with the empty vector. Asterisks indicate significant difference of *PvSPX* expression between overexpressing *PvSPX* and CK at 0.05 levels.

**Fig. S2**

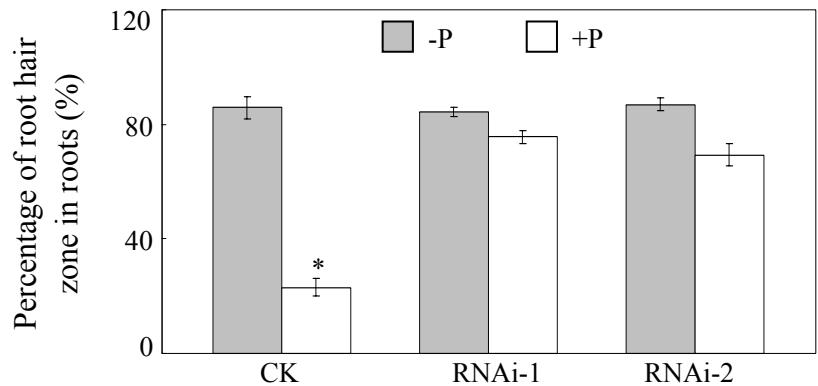

**Fig. S2** Expression of *PvSPX1* in *PvSPX1* RNAi transgenic bean hairy roots. Expression levels of *PvSPX1* were determined in bean hairy roots grown in MS medium containing 1.25 mM phosphorus by qPCR. Expression levels of the tested genes were quantified relative to expression levels of the reference gene *EF-1 $\alpha$*  (*PvTC3216*) using arbitrary units. RNAi-1/2: transgenic bean hairy roots with suppressed *PvSPX1* expression. CK: transgenic lines transformed with the empty vector. Asterisks indicate significant differences of *PvSPX1* expression in bean hairy root between RNAi and CK. \*:  $0.01 < p \leq 0.05$ ; \*\*:  $p \leq 0.01$ .

**Fig. S3**

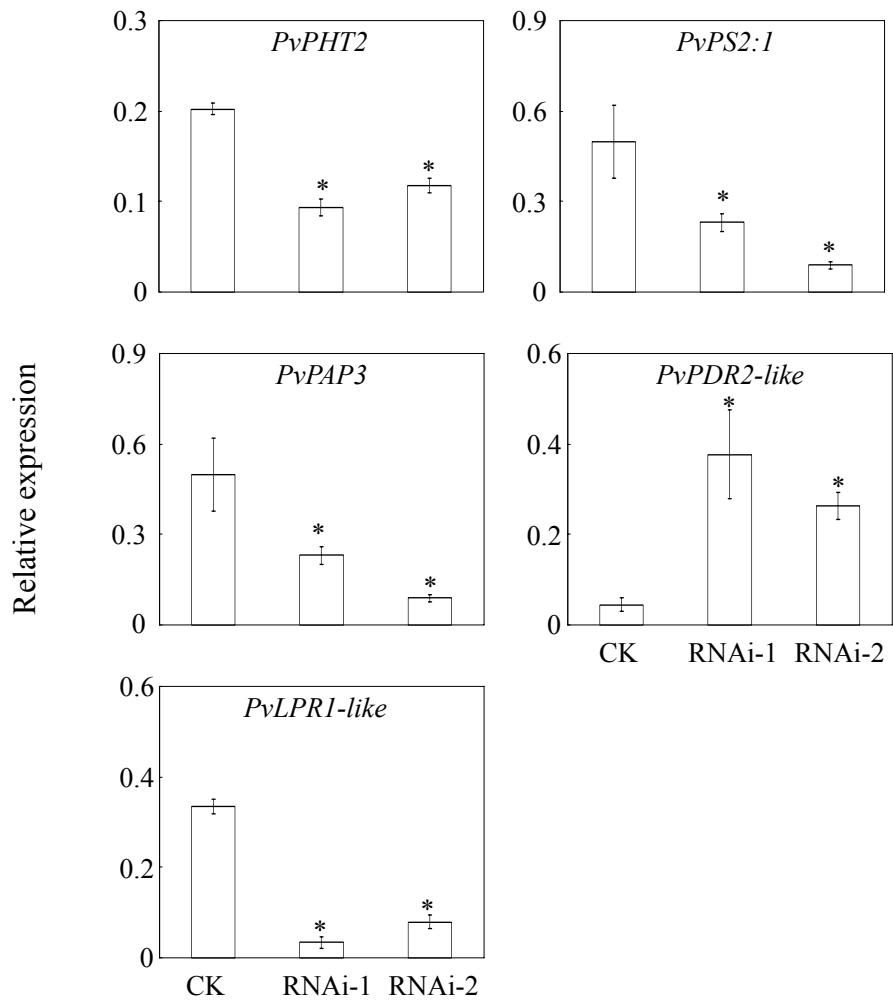

**Fig. S3** Growth and P concentration of bean hairy roots in CK and *PvSPX1* RNAi transgenic lines at two P levels. A) Fresh weight of bean hairy roots at two P levels; B) Phosphorus concentration in bean hairy roots. Bean hairy roots were grown in the medium containing 0  $\mu\text{M}$  (-P) or 1.25 mM (+P)  $\text{KH}_2\text{PO}_4$  for 14 d. Fresh weight and P concentration was separately measured. Each bar is the mean of four replicates with standard error. RNAi-1/2: transgenic lines with suppressing *PvSPX1*. CK: transgenic line transformed with the empty vector.

**Fig. S4**

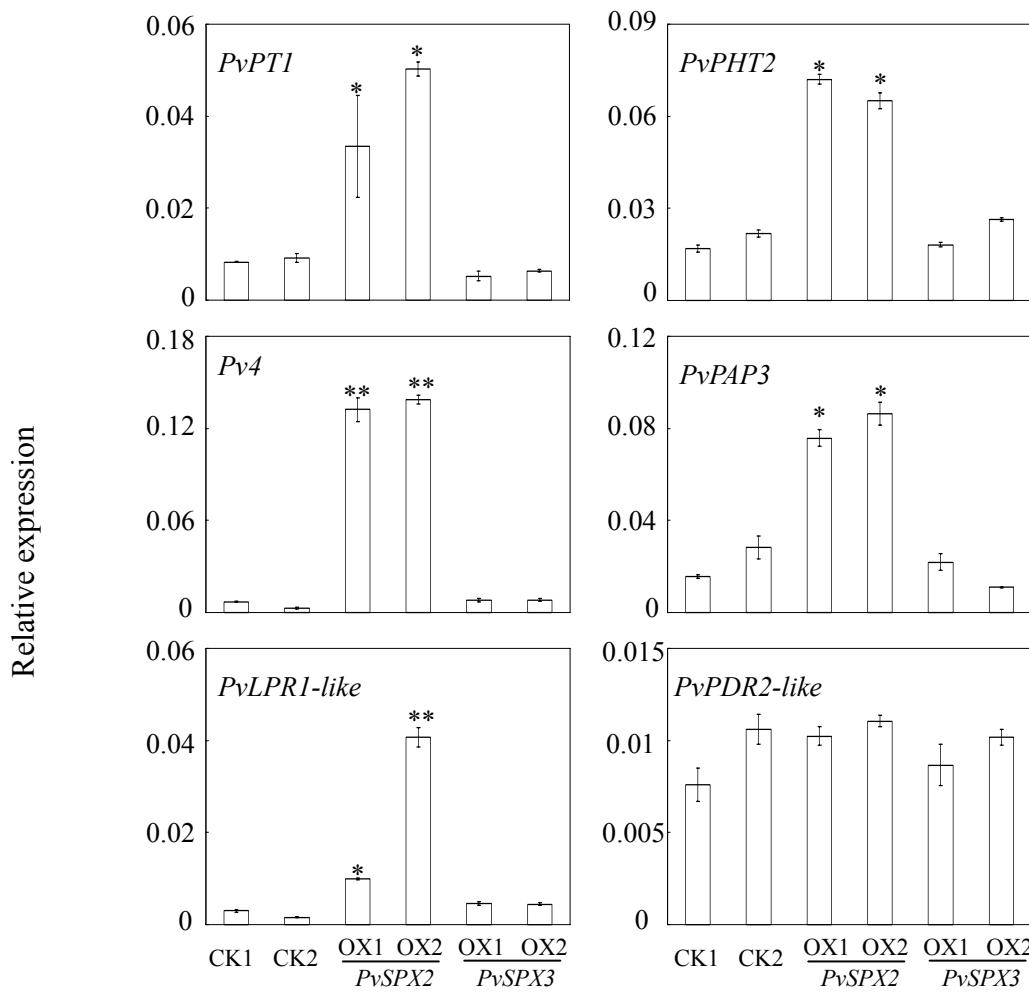

**Fig. S4** Percentage of root hair zone in bean hairy roots with suppressed *PvSPX1* at two P levels. Bean hairy roots were grown in the medium containing 0  $\mu$ M (-P) or 1.25 mM (+P)  $\text{KH}_2\text{PO}_4$  for 14 d. Ten lateral roots were selected to measure root length in different regions from each replicate. RNAi-1/2: two transgenic lines with suppressing *PvSPX1*. CK: transgenic line transformed with the empty vector. Asterisks represent significant differences between two P treatments at 0.05 levels.

**Fig. S5**

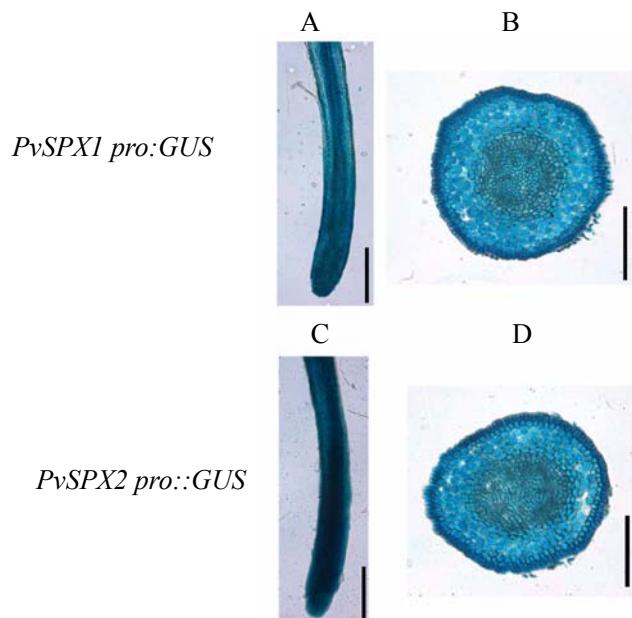

**Fig. S5** Transcription levels of down stream genes of *PvSPX1* in CK and *PvSPX1* RNAi transgenic lines. Expression patterns of down stream genes were separately determined in CK and two *PvSPX1* RNAi lines grown in the MS medium containing 1.25 mM phosphorus. Expression levels of the tested genes were quantified relative to expression levels of the reference gene *EF-1 $\alpha$*  (*PvTC3216*) using arbitrary units. RNAi-1/2: two transgenic bean hairy root lines with suppressing *PvSPX1*. CK: transgenic line transformed with the empty vector. Asterisks represent significant differences of gene transcripts between *PvSPX1* RNAi and CK lines at 0.05 levels.

**Fig. S6**

**Fig. S6** Transcription levels of down stream genes of *PvSPX1* in CK and overexpression transgenic lines of *PvSPX2* or *PvSPX3*. Expression patterns of down stream genes were separately determined in CK and two *PvSPX2* or *PvSPX3* overexpression lines grown in the MS medium containing 1.25 mM phosphorus. Expression levels of the tested genes were quantified relative to expression levels of the reference gene *EF-1 $\alpha$*  (PvTC3216) using arbitrary units. OX1 and OX2 indicate two transgenic bean hairy root lines with overexpressing *PvSPX2* or *PvSPX3*. CK1 and CK2 indicate the two transgenic lines transformed with the empty vector. Asterisks represent significant differences of gene transcripts between CK and *PvSPX2* or *PvSPX3* overexpression lines. \*:  $0.01 < p \leq 0.05$ ; \*\*:  $p \leq 0.01$ .

**Fig. S7**

**Fig. S7** Expression patterns of *PvSPX1* and *PvSPX2* through their *promoter:GUS* analysis. A and B: Longitudinal section (A) and cross section (B) of bean hairy roots transformed with *PvSPX1 Pro:GUS*; C and D: Longitudinal section (C) and cross section (D) of bean hairy roots transformed with *PvSPX2 Pro::GUS*. Scale bar is 0.5 cm for A and C, 0.2 cm for B and D.
