

Figure S1, Related to Figure 2. qPCR analysis of *Fgfr* and *Fgf* mRNA expression. (A) Relative mRNA expression of *Fgfr1-4* did not increase in *Pten*^{CKO} mouse skin. **(B)** Relative mRNA expression of various *Fgfs* in keratinocytes derived from *Pten*^{lox/lox} mice, cultured in low or high Ca²⁺ media and infected with adeno-cre virus. Data are presented as mean ± s.e.m.
