## **Supplemental Figures**

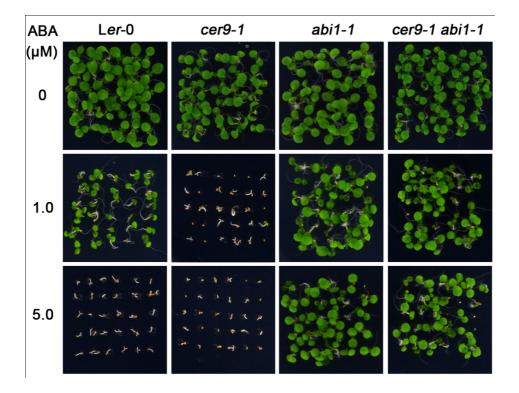

Figure S1. Sensitivity of the cer9-1 abi1-1 double mutant to ABA.

Ler-0 (wild type), cer9-1, abi1-1 and cer9-1 abi1-1 seeds were sown onto  $\frac{1}{2}$  MS agar medium supplemented with 0, 1.0, or 5.0  $\mu$ M ABA. Representative pictures show the morphology of seedlings 7 days after being sown on the medium plates.

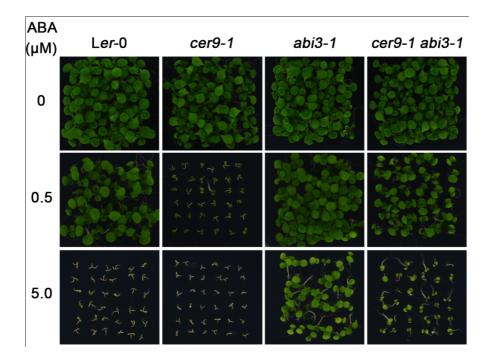

Figure S2. Sensitivity of the *cer9-1 abi3-1* double mutant to ABA.

Ler-0 (wild type), cer9-1, abi3-1 and cer9-1 abi3-1 seeds were sown onto  $\frac{1}{2}$  MS agar medium supplemented with 0, 0.5, or 5.0  $\mu$ M ABA. Representative pictures show the morphology of seedlings 7 days after being sown on the medium plates.

Figure S3. Sensitivity of the *cer9-2 abi5-1* double mutant to ABA.

Col-0 (wild type), Ws (wild type), *cer9-2*, *abi5-1* and *cer9-2 abi5-1* seeds were sown onto  $\frac{1}{2}$  MS agar medium supplemented with 0, 1.0, or 5.0  $\mu$ M ABA. Representative pictures show the morphology of seedlings 7 days after being sown on the medium plates.

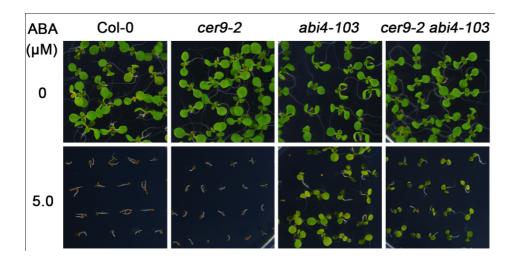

Figure S4. Sensitivity of the *cer9-2 abi4-103* double mutant to ABA.

Col-0 (wild type), *cer9-2*, *abi4-103* and *cer9-2 abi4-103* seeds were sown onto  $\frac{1}{2}$  MS medium supplemented with 0 or 5.0  $\mu$ M ABA. Representative pictures showed the morphology of seedlings 7 days after being sown on the media plates.
