

**Title: Multiple isoforms of phosphoenolpyruvate carboxylase in the Orchidaceae (subtribe Oncidiinae): implications for the evolution of crassulacean acid metabolism**

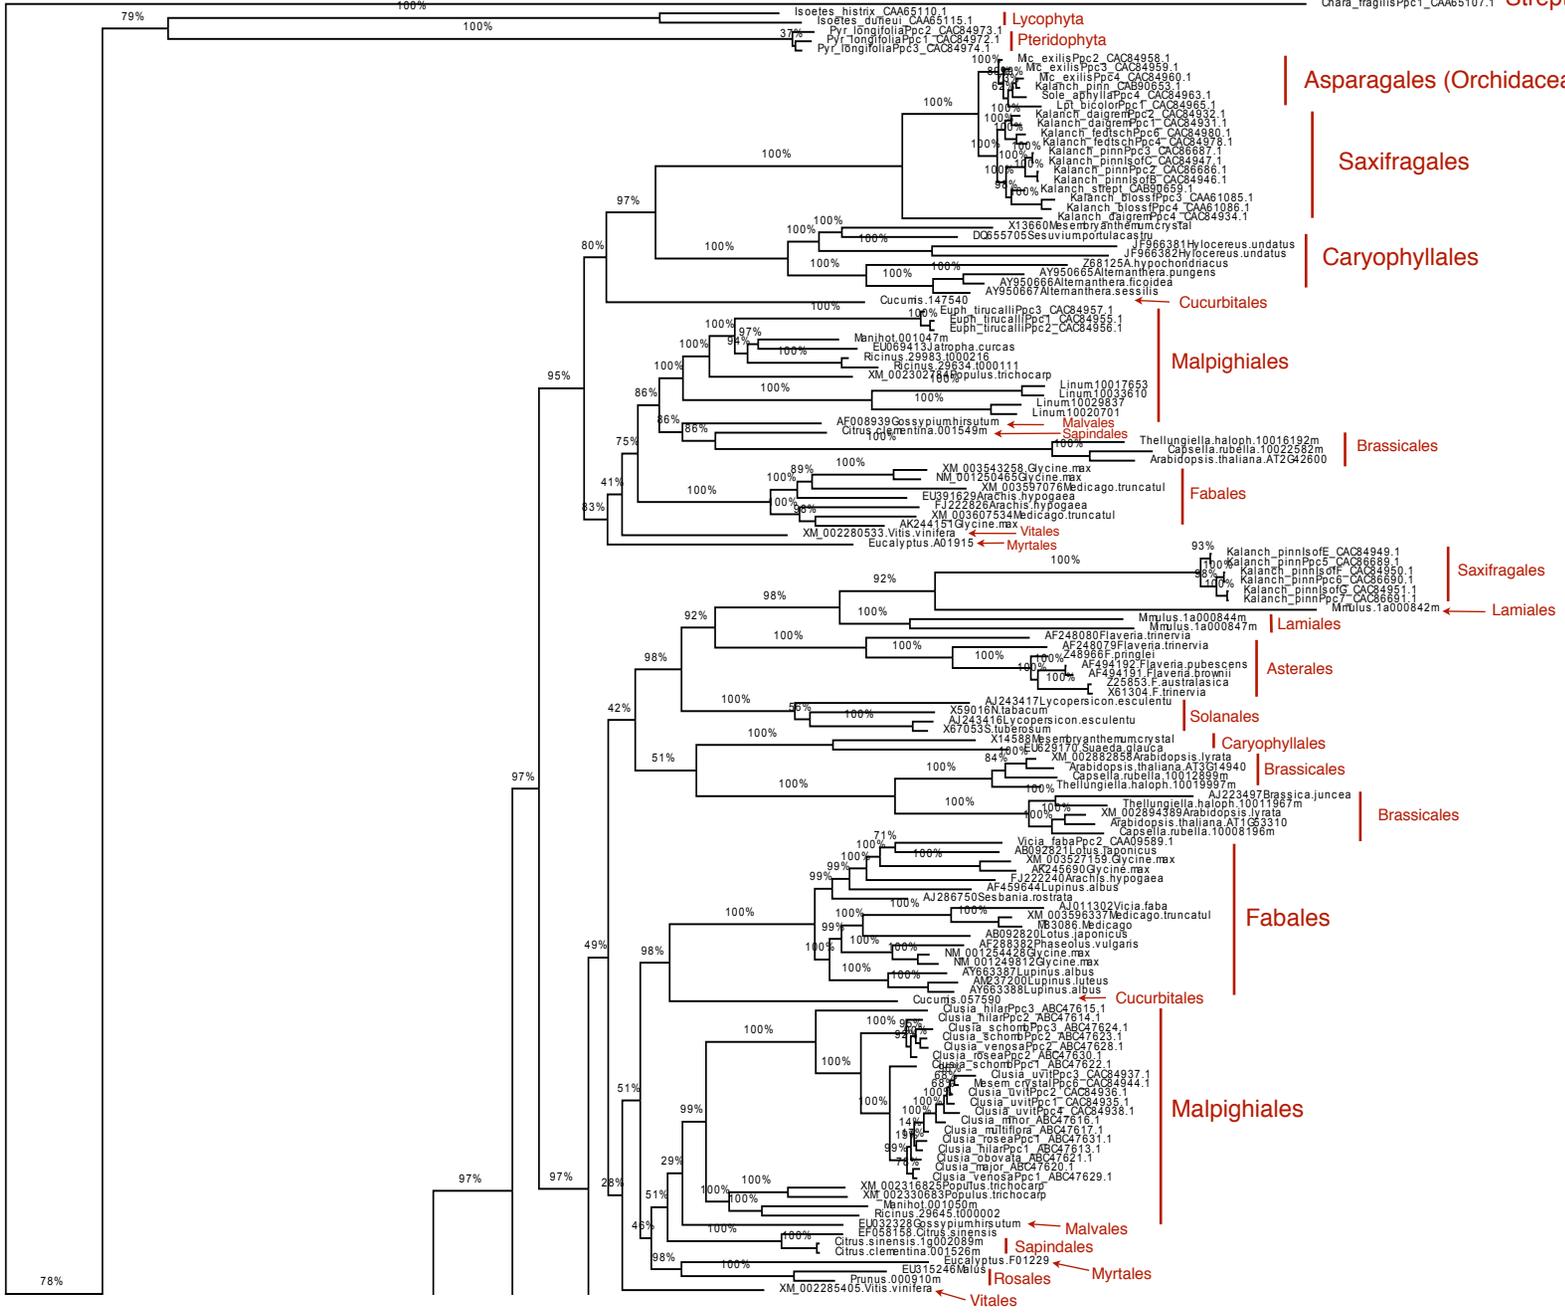

**Authors:** Katia Silvera<sup>\*†</sup>, Klaus Winter<sup>\*</sup>, B. Leticia Rodriguez<sup>†</sup>, Rebecca L. Albion<sup>†</sup>, and John C. Cushman<sup>†</sup>

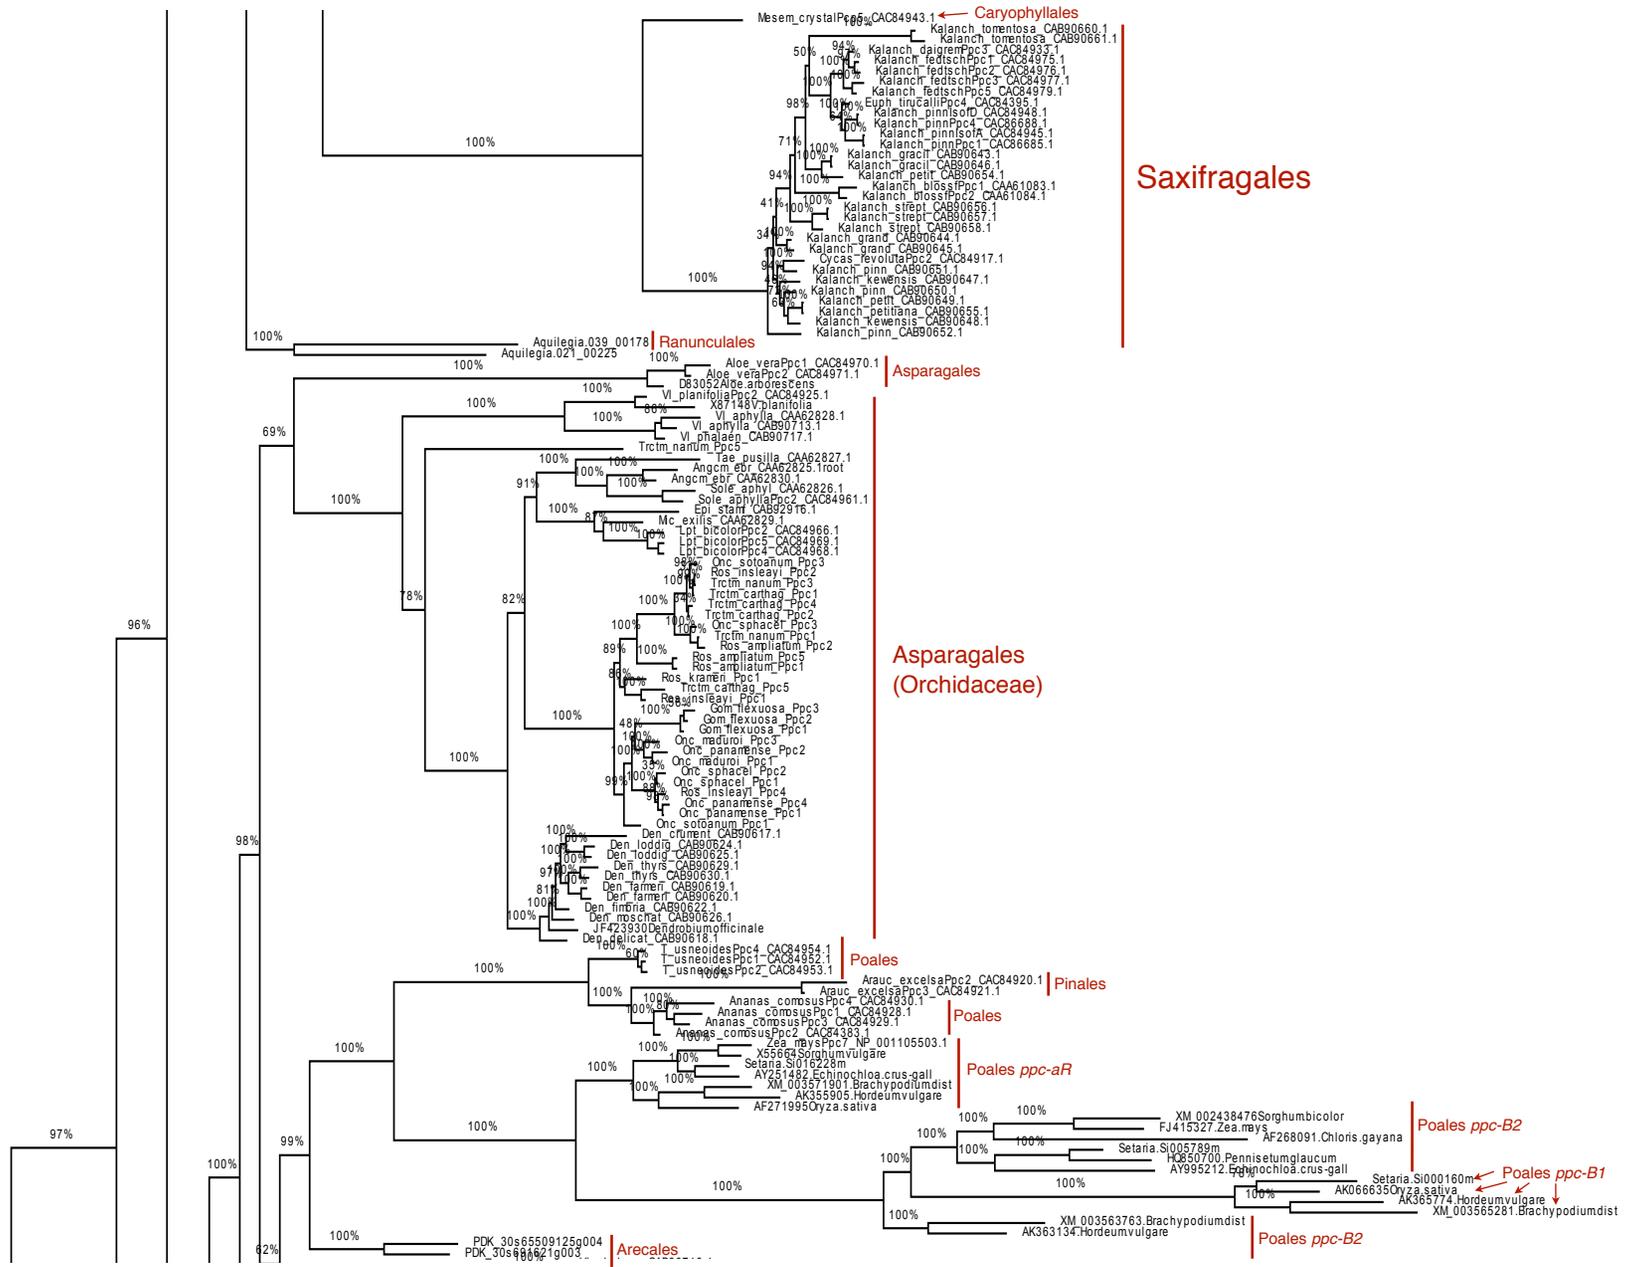

**Table S1.** Gene specific primer sets (GSP 5'– 3' position) used for 3'RACE amplification of the cDNA fragment coding for *Ppc* isoform for three species from the subtribe Oncidiinae. GSP1-1 to GSP1-23 were used for the first round of amplification, and GSP2-1 to GSP2-23 were used in the second round of amplification to reduce non-specific products

**Table S2.** Gene specific primer sets (5'– 3' position) used for confirmation of the cDNA fragment recovered by RACE coding for *Ppc* isoform for three species from the subtribe Oncidiinae species. *Oncidium maduroi* (MAD), *Oncidium panamense* (PAN), and *Rossioglossum ampliatum* (AMP) forward (F) and reverse (R) primer sets were used for one round of amplification
