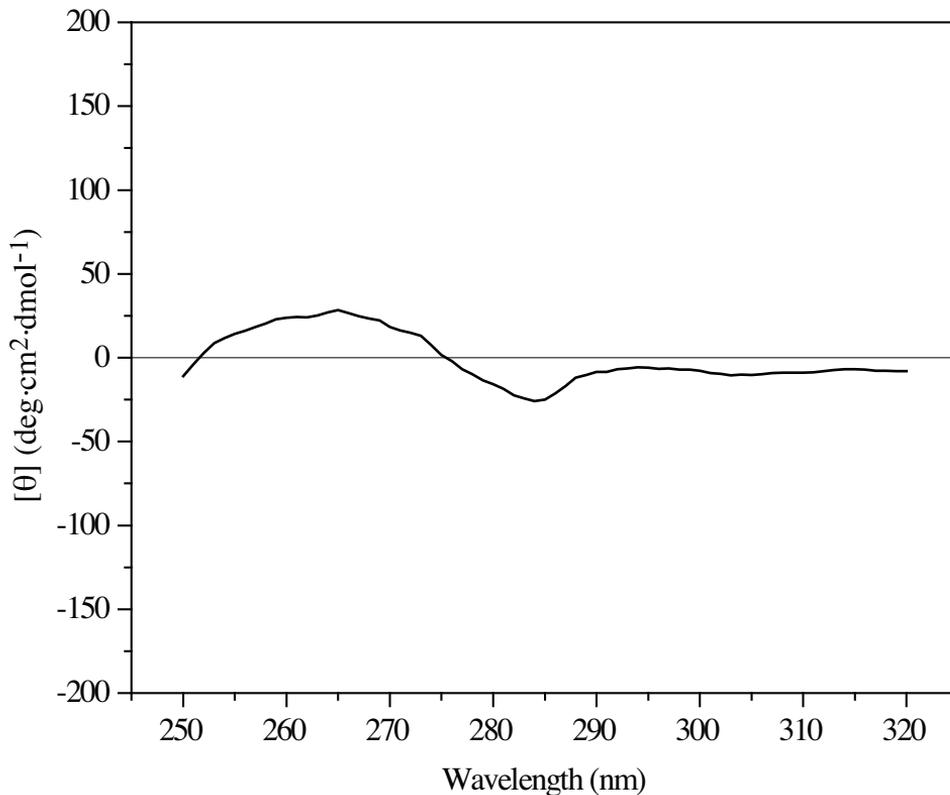

Figure S1. Near-UV CD spectrum (protein solution minus buffer) of Atg3 at 25 °C in 50 mM potassium buffer, pH 8.0. The spectrum is the average of 10 scans. Experimental conditions were as follows: time constant, 1 s; bandwidth, 1 nm; path length, 10 mm; sample volume, 1 ml.

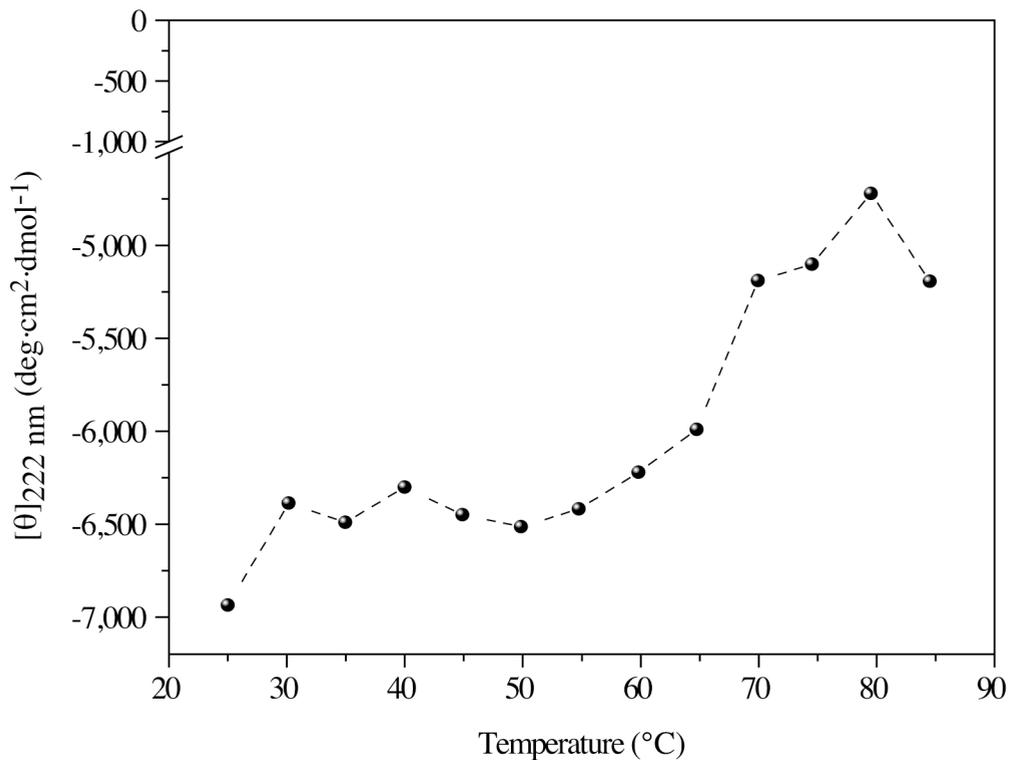

Figure S2. Melting curve (protein solution minus buffer) of Atg3. An increase in mean residue ellipticity at 222 nm ($[\theta]_{222 \text{ nm}}$) monitors the loss of the α -helical secondary structure element during heating. Experimental conditions were as follows: time constant, 1s; bandwidth, 1 nm; path length, 1 mm; sample volume, 300 μ l; temperature step, 5°C; temperature dead band, 0.5°C; temperature equilibration time, 0.1 min.

Figure S3. Amino acid sequence alignments between wild type and the Δ FR deletion mutant of Atg3 from yeast (A), wild-type and the recombinant FR fragment of Atg3 from yeast (B), and wild-type Atg3/ATG3 proteins from yeast and human (C). The alignment was created in the BioEdit Sequence Alignment Editor.¹

Table S1. Distribution of the Atg proteins from yeast in DCH-DCDF plot based on PONDR-VSL2.

Quadrant in DCH-DCDF plot	Core autophagy machinery protein from <i>S. cerevisiae</i>
Q1	<i>Atg3</i>
Q2	Atg1, Atg2, Atg4, Atg5, Atg7, Atg10, Atg11, Atg14, Atg15, Atg17, Atg18, Atg22, Atg26, <i>Atg27, Atg33, Atg34</i>
Q3	Atg6, Atg8, Atg9, Atg12, Atg19, Atg20, <i>Atg21</i> , Atg23, Atg24, Atg32, Atg36, Atg38
Q4	Atg13, Atg16, Atg29, Atg31

Q1, structured based on CDF, unstructured based on CH; Q2, structured based on both CDF and CH; Q3, structured according to CH, unstructured based on CDF; Q4, unstructured based on both CH and CDF. The CDF function was calculated from the PONDR-VSL2 score. Proteins in italic exhibit different localizations arising from different PONDR methods.

Table S2. Distribution of the Atg proteins from yeast in the DCH-DCDF plot based on PONDR-VL3.

Quadrant in DCH-DCDF plot	Core autophagy machinery protein from <i>S. cerevisiae</i>
Q1	-
Q2	Atg1, Atg2, Atg4, Atg5, Atg7, Atg10, Atg11, Atg14, Atg15, Atg17, Atg18, <i>Atg21</i> , Atg22, Atg26, Atg27
Q3	Atg6, Atg8, Atg9, Atg12, Atg19, Atg20, Atg23, Atg24, Atg32, <i>Atg33, Atg34</i> , Atg36, Atg38
Q4	<i>Atg3</i> , Atg13, Atg16, Atg29, Atg31

Q1, structured based on CDF, unstructured based on CH; Q2, structured based on both CDF and CH; Q3, structured according to CH, unstructured based on CDF; Q4, unstructured based on both CH and CDF. The CDF function was calculated from the PONDR-VL3 score. Proteins in italic exhibit different localizations arising from different PONDR methods.

Table S3. IDPRs of Atg proteins from yeast as predicted by PONDR-FIT.

Protein	IDPRs of ≥ 30 consecutive disordered residues
Atg1	353-390; 455-560; 632-668
Atg2	122-167; 255-295; 970-1027
Atg3	110-165
Atg6	88-170; 213-303
Atg8	1-30
Atg9	24-256; 904-946
Atg11	100-156; 524-554; 717-769; 791-828; 1045-1102
Atg12	1-110
Atg13	276-465; 473-738
Atg14	60-100; 310-344
Atg16	1-44
Atg18	181-225; 321-389
Atg19	128-160
Atg20	1-87; 96-164; 341-374; 485-536
Atg21	32-98; 187-254
Atg23	321-453
Atg26	1-100; 111-186; 424-489
Atg27	160-196
Atg29	126-213
Atg31	1-50; 108-158
Atg32	1-68; 102-132; 162-208; 341-388
Atg33	125-158
Atg36	63-131; 240-293
Atg38	193-226

The residues with the PONDR-FIT score near to 0.5 or higher were considered disordered. The numbers indicate the residue position in the amino acid sequence of a particular protein.
