

Figure S3 - Phylogenetic tree of the *JHE*, *JHEH*, and *JHDK* genes from *B. mori* and other insects. The amino acid sequences encoding by the *JHE* genes (A), *JHEH* genes (B), and *JHDK* genes (C) from six insect species, including *Bombyx mori* (Bm), *Drosophila melanogaster* (Dm), *Anopheles gambiae* (Aga), *Apis mellifera* (Am), *Tribolium castaneum* (Tc), and *Danaus plexippus* (Dp), were used to build a phylogenetic tree. See Figure 2 for a detailed description of the approaches for constructing the phylogenetic tree.
