Supplementary Figure S1: GO enrichment

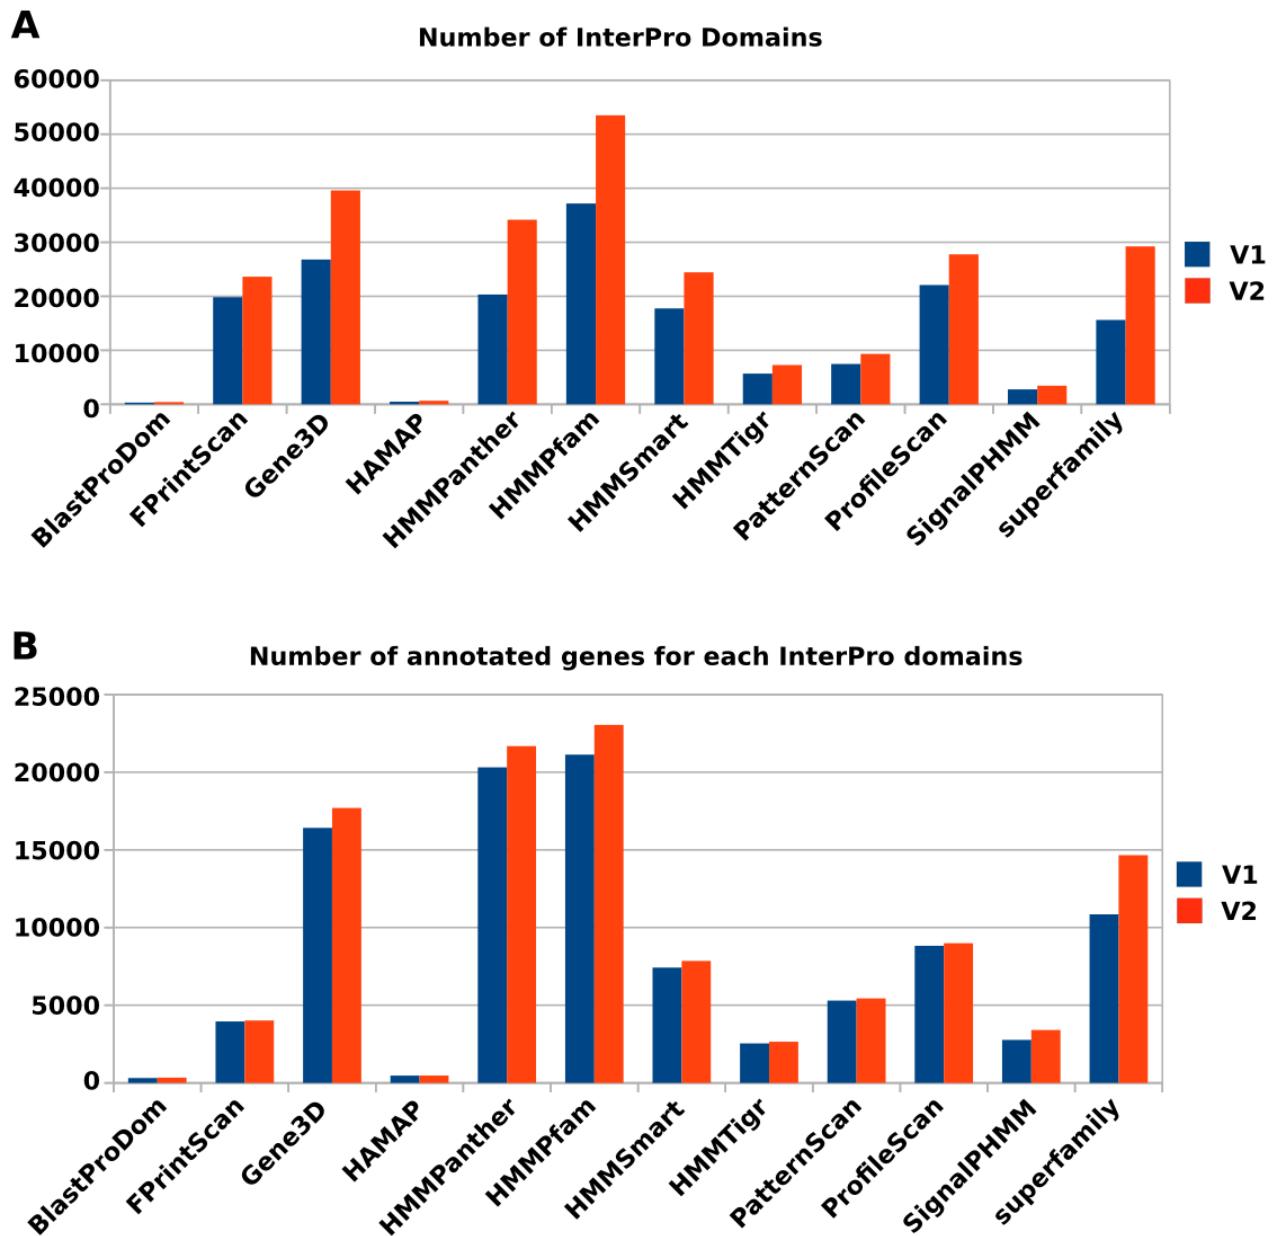

Enrichment GO (Gene Ontology) analysis of the new predicted genes.

Supplementary Figure S2: Analysis of the coding-protein genes with a different structure.

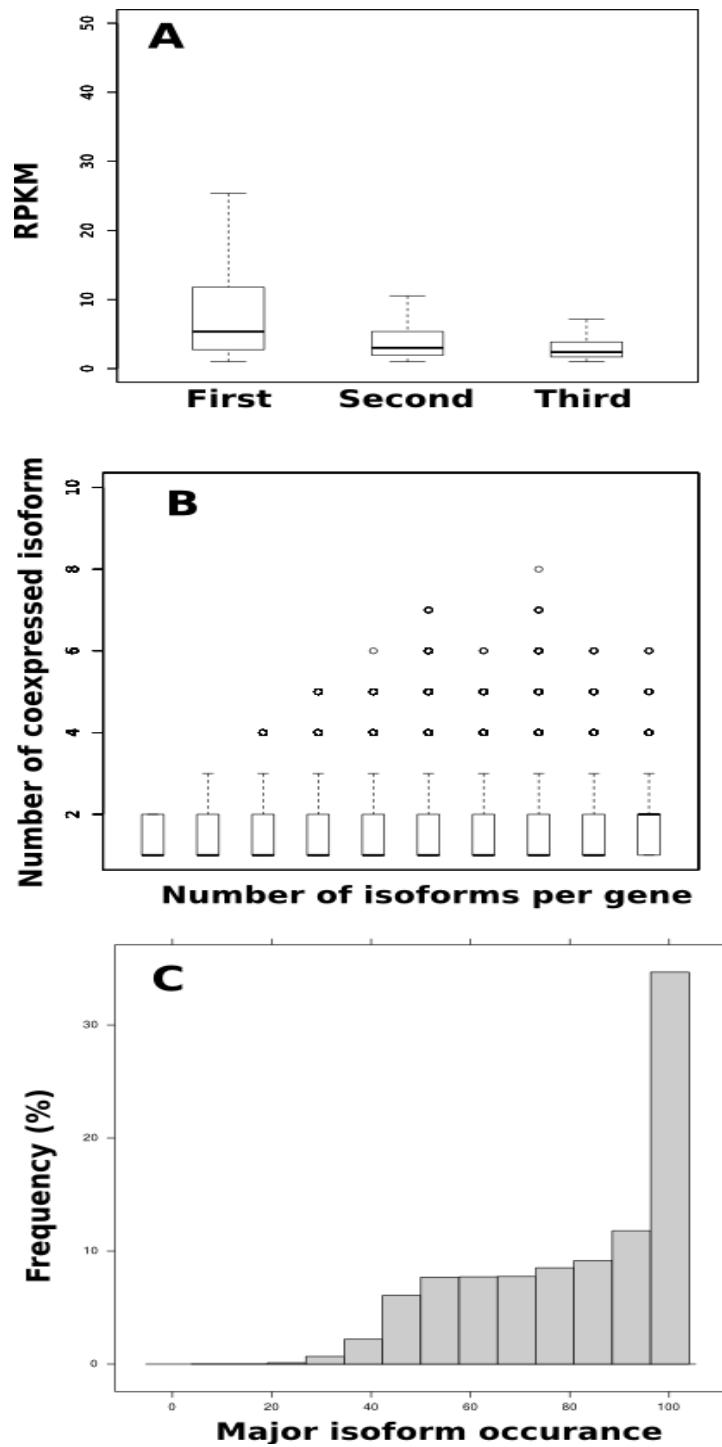

Supplementary Figure S3: InterProScan annotation comparison between v1 and v2 gene predictiton

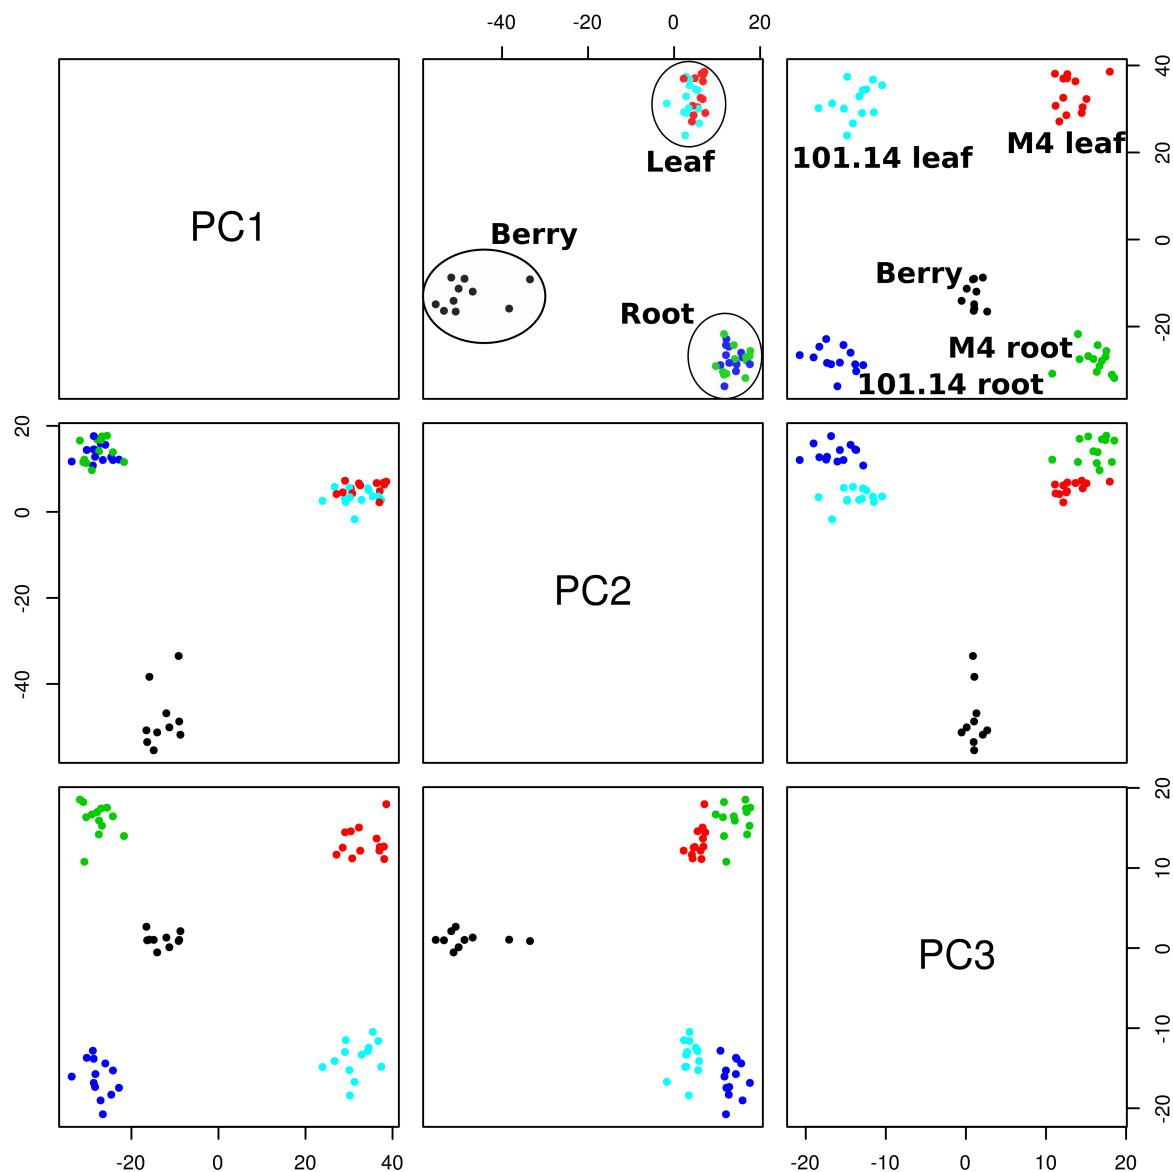

Supplementary Figure S4. Flux-capacitor quantification results

(A) RPKM values distribution of the first, second and third most abundant isoform within each samples. (B) Number of co-expressed isoform compared to the number of isoform per gene. (C) Frequency of the major isoform across the samples.

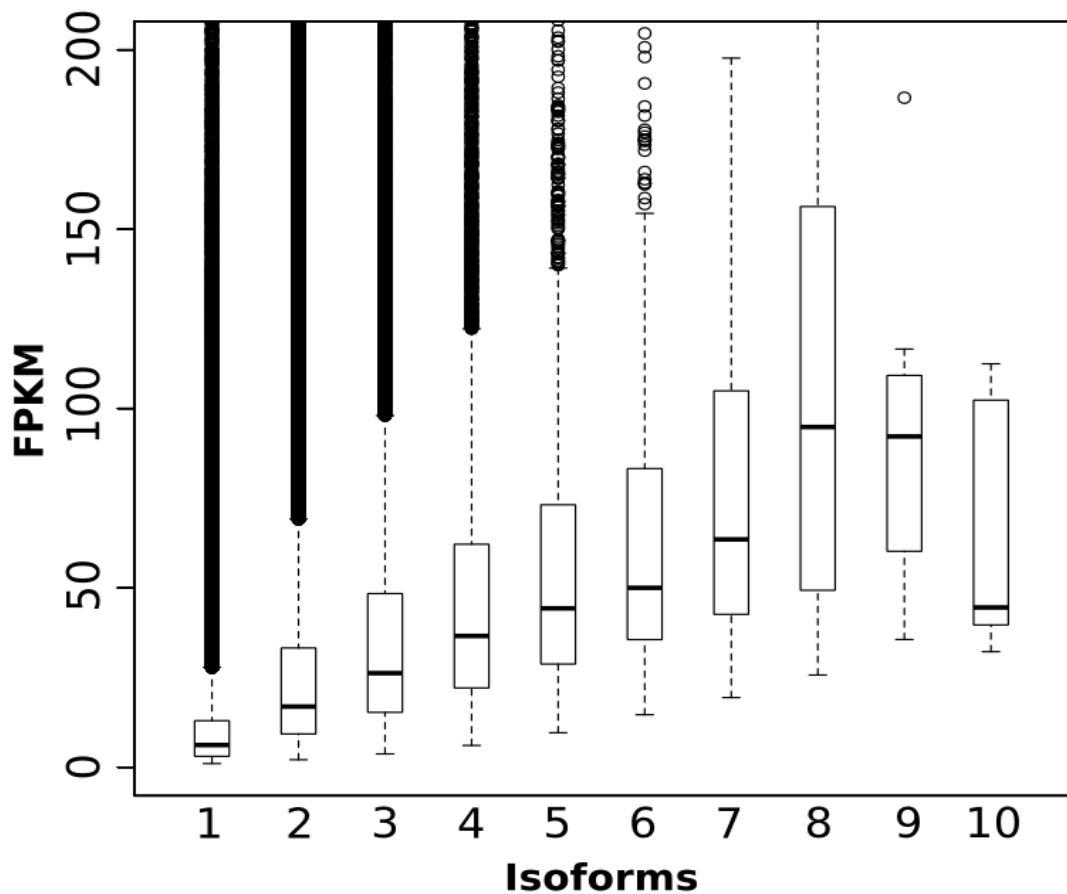

Supplementary Figure S5. Flux-capacitor PCA

Scatter plot of the first three principal component analysis of the expression values ratio between the first two highly expressed isoforms.

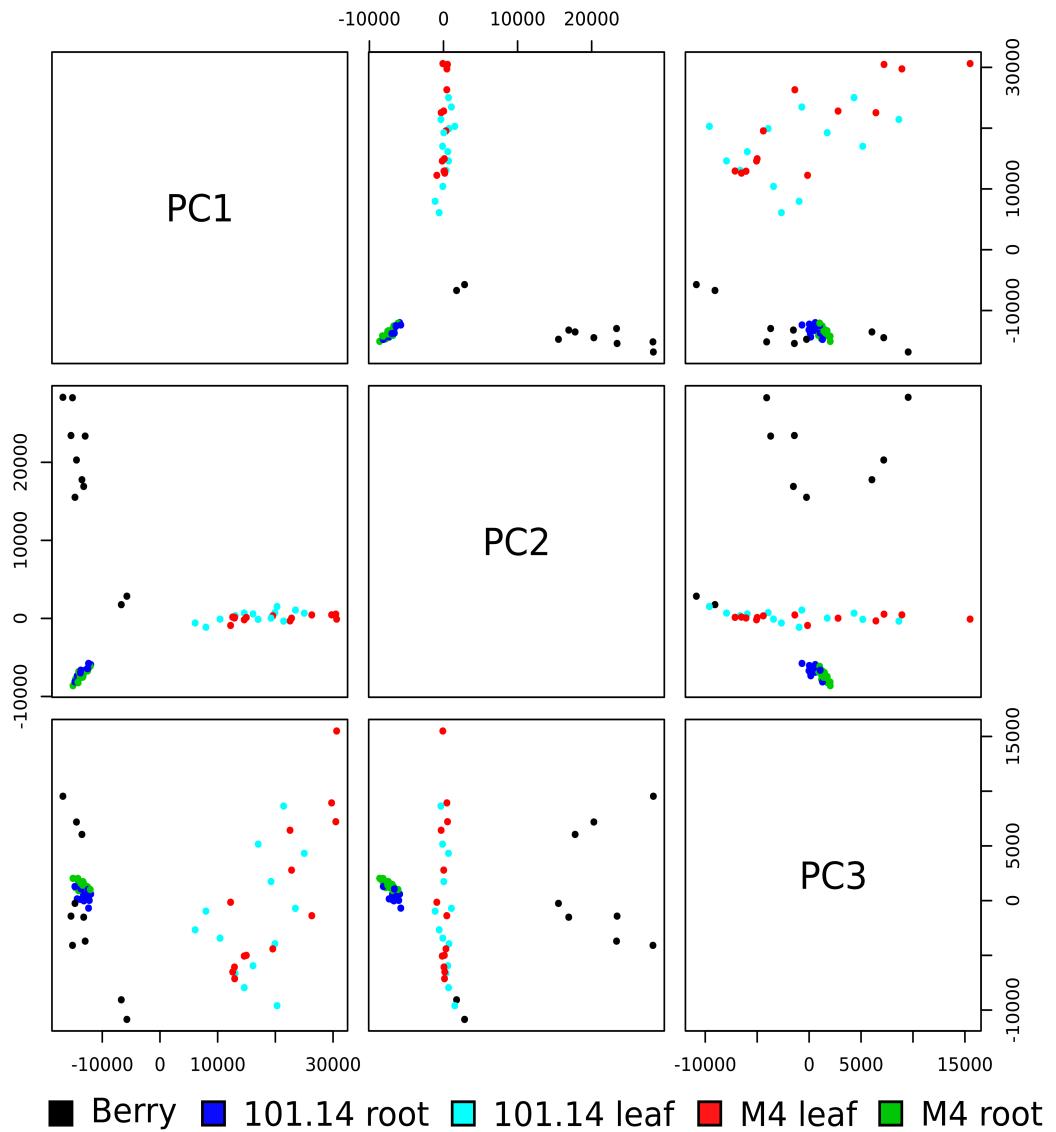

Supplementary Figure S6: Correlation between the number of identified isoforms and gene expression level

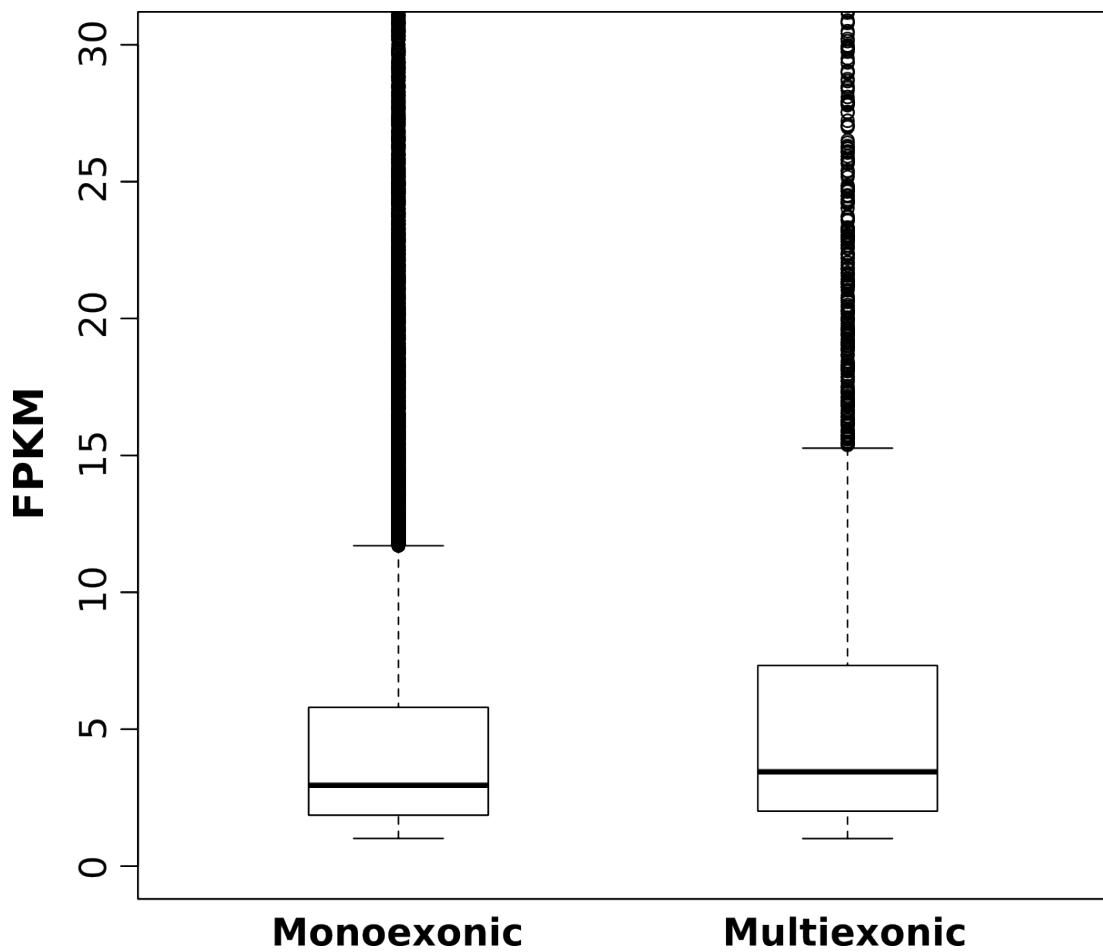

Supplementary Figure S7: PCA on the expression pattern of genes rather than isoforms.

Tissues are resolved by the first two components, while genotypes cannot be resolved, even when the second and third components are considered

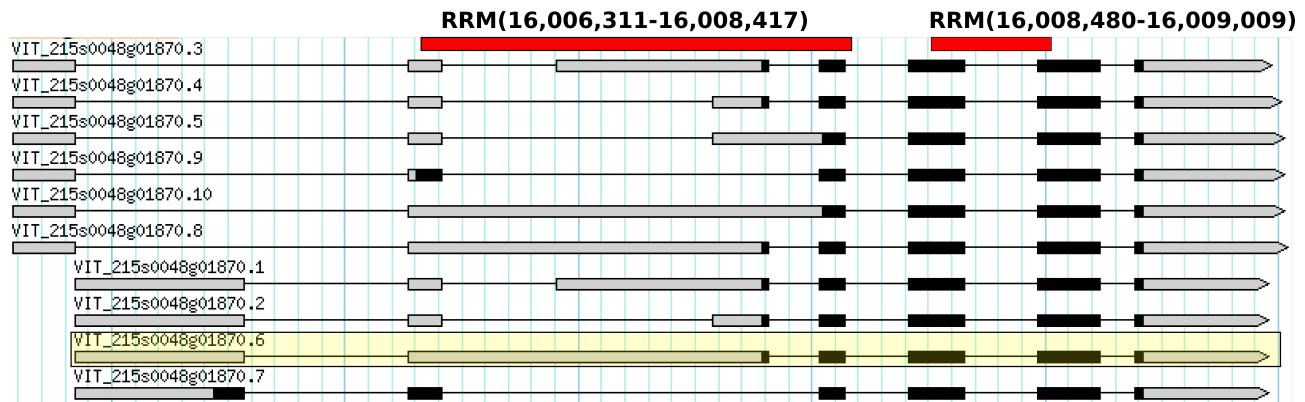

Supplementary Figure S8: Correlation between lincRNAs structure and expression level.

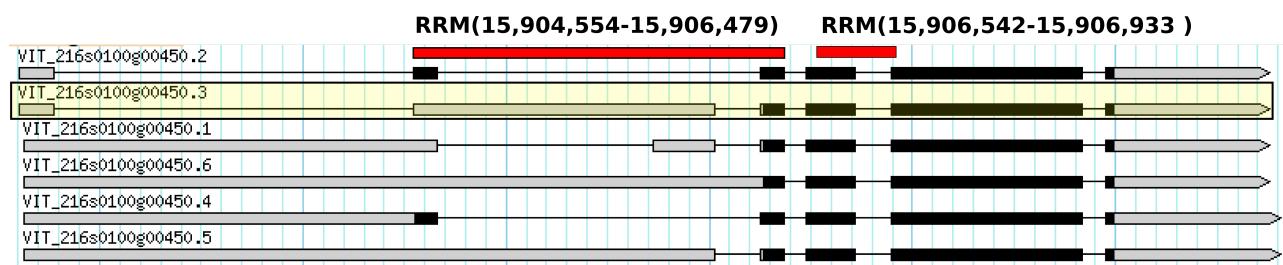

Splicing factor isoforms and RRM (RNA Recognition Motif) domain.

Protein domains were identified scanning the longest protein coding sequence against PROSITE database (<http://prosite.expasy.org/>). The analysis was restricted considering only the isoforms that were differentially expressed between cultivars (highlighted in yellow). Red bars show which part of the transcript encode the RRM (RNA Recognition Motif) domain. The genomic coordinates of the protein domain are reported between bracket. Grey blocks represents UTRs regions while red blocks the coding sequences.

Supplementary Figure S10: VIT_2160100g00450

Supplementary Figure S11: VIT_204s0069g00800

Supplementary Figure S12: VIT_2160098g01020

Supplementary Table S1: Introns support analysis.

| | All Introns | | Shared | Exclusive Introns | |
|---------------|--------------|--------------|--------------|-------------------|-------------|
| | V1 | V2 | V1 and V2 | V1 | V2 |
| # Tot Introns | 117835 | 124401 | 115166 | 5162 | 9235 |
| # confirmed | 105033 | 113685 | 105867 | 2383 | 7818 |
| % confirmed | 89.14 | 91.39 | 91.93 | 46.16 | 84.66 |
| 1 evidence | 12823 (12.2) | 19135 (16.8) | 13848 (13.1) | 1154 (48.4) | 5287 (67.6) |
| 2 evidence | 30434 (29) | 32392 (28.5) | 30584 (28.9) | 564 (23.7) | 1808 (23.1) |
| 3 evidence | 61776 (58.8) | 62158 (54.7) | 61435 (58) | 665 (27.9) | 723 (9.2) |

Supplementary Table S2: Types and number of evidence confirming introns

On each cell it is reported the number of introns confirmed by that kind of evidence. Label “# evidence” indicates the number of different evidence that simultaneously confirm an intron.

| # evidence | V1 | | | | | |
|------------|-------------|---------|---------|-------------------|---------|---------|
| | All Introns | | | Exclusive Introns | | |
| | EST | Protein | RNA-seq | EST | Protein | RNA-seq |
| 1 evidence | 455 | 8594 | 3774 | 46 | 952 | 156 |
| 2 evidence | 11722 | 22029 | 27117 | 239 | 454 | 435 |
| 3 evidence | 61776 | 61776 | 61776 | 665 | 665 | 665 |

| # evidence | V2 | | | | | |
|------------|-------------|---------|---------|-------------------|---------|---------|
| | All Introns | | | Exclusive Introns | | |
| | EST | Protein | RNA-seq | EST | Protein | RNA-seq |
| 1 evidence | 404 | 7710 | 11021 | 4 | 186 | 5097 |
| 2 evidence | 12801 | 22790 | 29193 | 854 | 987 | 1775 |
| 3 evidence | 62158 | 62158 | 62158 | 723 | 723 | 723 |

| # evidence | Shared Introns | | |
|------------|----------------|---------|---------|
| | EST | Protein | RNA-seq |
| 1 evidence | 400 | 7524 | 5924 |
| 2 evidence | 11947 | 21803 | 27418 |
| 3 evidence | 61435 | 61435 | 61435 |

Supplementary Table S3: Fusion/splitting events analysis

“**No hit**”: the gene models from both the prediction do not have an Arabidopsis homologous protein, “**v1 no hit**” and “**v2 no hit**”: v1 or v2 gene model do not have an Arabidopsis homologous protein. “**Ambiguous**”: cases where one of the splitted genes do not have a Arabidopsis, homologous sequence. “**v1 optimal**” and “**v2 optimal**”: v1 or v2 gene model has a better structure when aligned on Arabidopsis homologous protein.

| | Splitted | Fused |
|-------------------|-----------------|--------------|
| No hit | 5 | 5 |
| V1 no hit | 9 | 1 |
| V2 no hit | 0 | 0 |
| Ambiguous | 10 | 28 |
| V1 optimal | 29 | 54 |
| V2 optimal | 38 | 161 |
| Tot | 91 | 249 |

Supplementary Table S4: Analysis of the coding-protein genes with a different structure.

| | |
|-------------------------------|------|
| Equal score | 13 |
| V2 non homology | 38 |
| V1 non homology | 39 |
| Both No Homology | 169 |
| Different Best Hit | 458 |
| Low identity (<30%) | 610 |
| V1 better score | 1432 |
| V2 better score | 2207 |
| Total | 4966 |

Splicing factor T-test result tables.

Significant adjusted p-value (<0.05) are highlighted in red.
