

Supplementary Data

Figure S 1. TSAb specific for the human-TSHR and the mouse-TSHR in parental strains of BXH mice (C3H and B6). Sera were tested one month week after three immunizations (3x) with A sub-Ad.

- A) Human-TSHR -TSAb; * p=0.026, (Rank Sum test).
- B) Mouse -TSHR TSAb; ** p =0.006 (Rank sum test);
- C) Ratio of mouse to human-TSHR TSAb

TSAb data (mean + SEM) are the responses expressed as a percentage for sera from mice immunized with control adenovirus (indicated by dashed lines in A to D). Number of mice studied: C3H and B6, n=10.

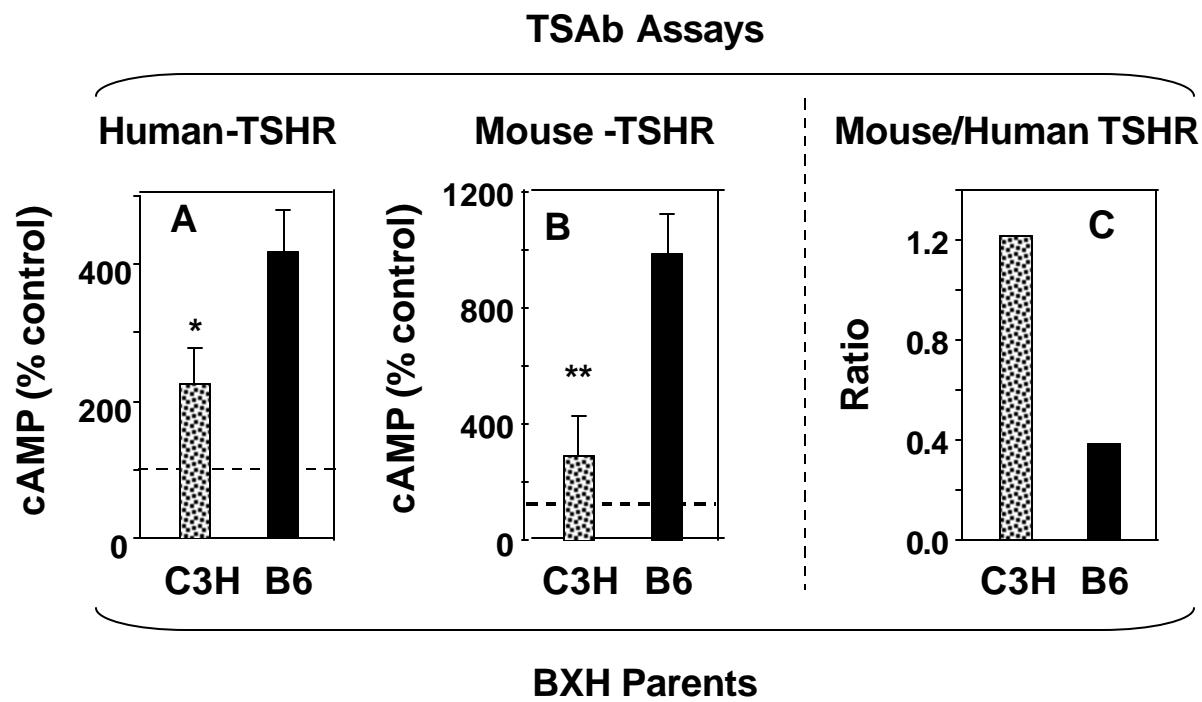

Figure S1

Supplementary Table S1. Chr linkage for TSAb in **CXB** and **BXH** mice immunized three times with TSHR A-subunit adenovirus. TSAb activity was measured with mouse (m)-TSHR cells and human (h)-TSHR cells; from these data, the TSAb ratio (human: mouse, h:m or mouse: human, m:h) was calculated. Loci and chromosomal locations (megabases, Mb) are presented for LRS scores suggestive of linkage. Possible candidate genes are included with the corresponding (or likely) human chromosome in parentheses. Genenetwork identifiers (GN) are included.

^b below LRS 14.5 cut-off for association

^c excluding BXH9 (outlier)

^d; without SEM

^e similar observations for h:m TSAb (GN10160) but lower LRS values.

LRS = LOD X 4.6.

Candidates:MHC region: C2 (34.470663), Hspa1 (34.577246);Tnf (34.807461; Ltb (34.802573);

Il1rapl1, interleukin 1 receptor; IgV region genes, immunoglobulin heavy chain variable region genes.

GN identifiers (after 3 immunizations):- Human TSAb: BXH GN10148; CXB GN10684; Mouse TSAb

BXH GN10156, CXB GN10688; TSAb Ratio: BXH m:h GN10158, CXB h:m GN 10689.

Supplementary Table S2. List of genes within the mouse Chr 12 locus linked to the preferential recognition by thyroid stimulating antibodies for the mouse- versus human-TSHR. Within this locus (113.595 - 118.161 Mb), 32 of 66 genes encode immunoglobulin H chain variable regions genes. The latter genes are highlighted in yellow to provide a visual impression; the amount of information on individual genes requires a type too small to be legible. Of the 34 non-highlighted genes, only 7 are identified (*Crip 1*, *Crip 2*, *Tmem 121*, *Adam6*, *Vipr*, *ptprn2* and *Rapgef5*).
