

SUPPLEMENTARY FIG. S4. The dorsal fin morphology is consistent through phenotype stages between fish of differing genotypes. Leopard mutants (*cx41.8^{tl}*) and albino mutant fish (*slc45a2^{b4}*) were stage matched by SL to appropriate wildtype fish. Wildtype fish DP1–5 (**A, D, G, J, M**), leopard pigmented fish (**B, E, H, K, N**), and albino fish (**C, F, I, L, O**) show different development of pigment pattern.
