Supplementary Figure 1

Figure Legend for supplementary figure 1.

Supplementary Figure 1. *BMP2* isoform ratios as determined by real-time PCR in CLs from carriers/unaffected (light gray) and affected/patients (dark gray) containing NMD+ (**A**) and NMD- (**B**) mutations. Data are shown as box and whiskers plots with whiskers indicating Tukey whiskers and extreme data points indicated by filled circles. An α -level of 0.05 was chosen, and P-values < 0.05 were considered statistically significant.
