

Supplementary Figure 3. Sporozoites incubated with or without 10 µg/ml anti-CSP antibody.

Data from 4 independent traversal experiments conducted with or without 10 µg/ml of monoclonal anti-CSP antibody are shown. **(A)** Data are expressed as the mean percentage cells traversed. Black circles and squares represent the percentage cells traversed by sporozoites incubated without or with 10 µg/ml anti-CSP antibody, respectively. **(B)** The percentage inhibition of traversal was calculated for sporozoites only compared to sporozoites

incubated with 10 µg/ml anti-CSP antibody. Data are expressed as the median percentage traversal inhibition \pm interquartile range.
