

The nuclear localization of γ -tubulin is regulated by SadB-mediated phosphorylation

Greta Eklund, Stefan Lang, Johan Glindre, Åsa Ehlén and Maria Alvarado-Kristensson

Supplemental Video

Supplemental Video S1. Illustrates DIC images of a mitotic U2OS cell expressing cytosolic D385-C γ -tubGFP ($n = 14$, n represents the number of recorded mitotic cells).

Supplemental Video S2. Illustrates confocal images of the mitotic U2OS cell expressing cytosolic D385-C γ -tubGFP (green) shown in Supplemental Video S1.

Supplemental Video S3. Illustrates DIC images of a mitotic U2OS cell expressing S385-C γ -tubGFP ($n = 6$, n represents the number of recorded mitotic cells).

Supplemental Video S4. Illustrates confocal images of the mitotic U2OS cell expressing S385-C γ -tubGFP (green) shown in Supplemental Video S3.
