

Figure S1. Relative water content (RWC) of leaves and leaf water potential (Ψ_{leaf}) at decreasing relative soil volumetric water content (VWC, 100%, 50%, 25%) levels in S (black bars) and R plants (white bars). (A) RWC, (B) Ψ_{leaf} . Different letters above the columns indicate significant differences (t test, $P < 0.05$). Data points are means \pm SE ($N = 6$ to 10).
