

Supplementary Data

SUPPLEMENTARY FIG. S1. Quantitative real-time polymerase chain reaction analyses for the cell lines C3H10T $\frac{1}{2}$ -BMP2 and BMP2/Smad8ca at all four time points. Δ Ct values (using the housekeeping gene HPRT as a reference) are plotted. The same mRNA preparations as used for the microarrays were used for these assays. BMP, bone morphogenetic protein; HPRT, hypoxanthine phosphoribosyl transferase.
