

Supplementary Figure S1. Effects of miR-122 and miR-142-3p on plasmid expression in transfected cells. **(a)** Quantification of the miR-122, AmiR142 and AmiR122 effect on pDsRed.122TS plasmid expression in Huh7 cells. The DsRed expressing cells were counted from three different photomicrographs. Error bars represent standard deviation of triplicates. **(b)** Quantification of the miR-142-3p effect on UbC.Luc and UbC.Luc.142TS plasmid expression in U937 cells. The luciferase-expression plasmids were co-transfected with β -galactosidase (B-gal) expressing plasmids and the effect of the miR-142-3p was assayed as a ratio between luciferase and B-gal. Error bars represent standard deviation of triplicates.
