

Supplementary Figure S4. Toxicity assay for mice treated with either AmiR142 or AmiR122. Serum from animals hydrodynamically injected with either 20 nmols of AmiR122 or AmiR142 was collected 3 days after antagomir delivery. The animals that receive AmiR122 or AmiR142 were hydrodynamically injected 1 month in advance with 5 μ g of pLive.Luc.122TS. AST, ALT and creatinin were measured and average values are plotted from at least 3 different animals (+SD).
