

Figure S2

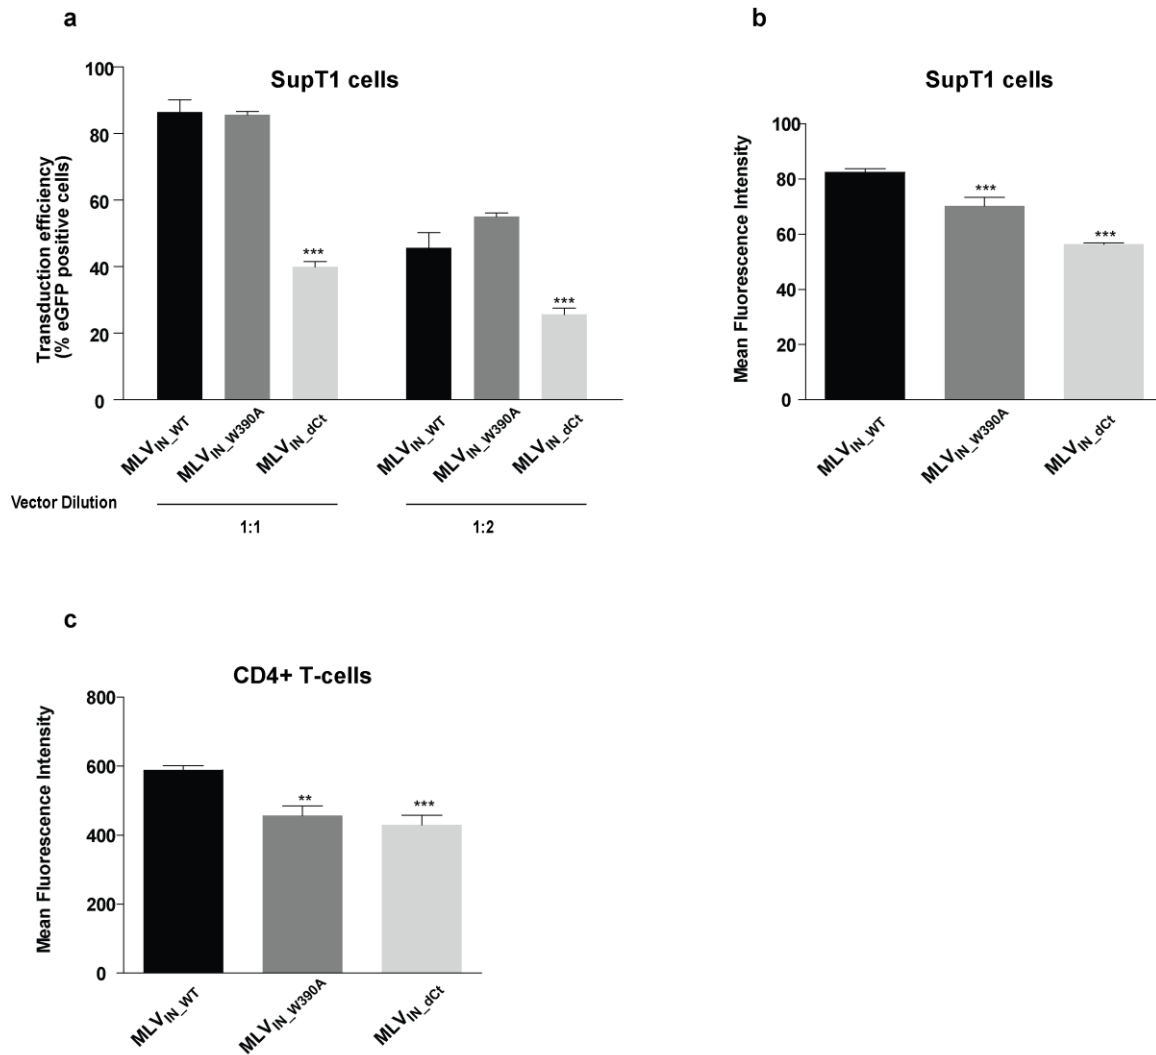

Figure S2: Transduction efficiency and mean fluorescence intensity for BinMLV vectors

(a) SupT1 cells were transduced with equal RT-units of the indicated BinMLV vectors expressing eGFP. After 10 days, the percentage of eGFP-positive cells was determined for indicated vector dilutions. Average values and standard deviations of triplicate measurements are shown.

(b-c) Mean fluorescence intensity of SupT1 cells (b) and CD4+ T-cells (c) transduced with the indicated MLV-derived vectors at $\text{MOI} \leq 1$ (i.e. <50% eGFP positive cells, see Figs 2b-c, respectively). Data represent means and standard errors of the mean (n=6 for SupT1 cells and n=3 for CD4+ T-cells). Differences were determined using Student's t test. ** $p < 0.01$, *** $p < 0.001$.
