

Figure S12 Reduction of Rap1 activity during eye development does not alter Egrf expression pattern. (A-A') Rap1 dsRNA or (B-B') PDZ-GEF dsRNA were clonally expressed (marked by GFP) in the third instar eye discs using the FLP-out Gal4 system. Discs were then stained with an anti-Egfr antibody. The arrowhead refers to the position of the morphogenetic furrow. Anterior is to the right.
