Table S1: Daily food intake of mice (wildtype and Thy1-aSyn housed together) during treatment with control diet or diet with TRO compounds over 3 months (1-4 months of age). No significant differences in food intake between TRO treated and control diet treated mice (2x4 ANOVA, mean±SEM). N=19-21 per group.

		Age (months)		
		2	3	4
TRO19622 high dose	Plasma	11.17 ± 0.27 (1)	11.64 ± 3.60 (1)	15 ± 2.52 (1) 14.24 ± 2.21 (2)

Table S11 Effect of TRO compounds on motor skills. Errors per step were recorded on the challenging beam test. For the pole test, mice were placed snout up on top of a vertical pole and time to turn upside down and total time from beginning of the test to reaching the floor were measured. Mean of five trials, SEM; ##p<0.01 compared to wildtype (WT) (transgene effect, only shown for 1 month treatment, but also present after 3 months treatment), *p<0.05, **p<0.01 compared to control diet (drug effect after 1 or 3 months of treatment), ^p<0.05, ^^p<0.01 compared to 1 month treatment (progression of transgene effect); 2x2x2 ANOVA followed by Fisher's LSD for errors per step, Mann Whitney U and Wilcoxon signed rank test for pole test, n=16-20 per group.

		Wildtype Control diet	TRO diet	Thy1-aSyn Control diet	TRO diet

Table S13 Effects of TRO compounds on number and percentage area covered by alpha-synuclein positive aggregates in substantia nigra of Thy1-aSyn mice. TRO40303 at the high dose (n=5 per group) had no effects on aggregate number or surface covered by aggregates (%) in the dorsolateral (dl), dorsomedial (dm), ventrolateral (vl) or ventromedial (vm) substantia nigra. TRO19622 at the high dose (n=7 per group) but not low dose (n=5 per group) significantly increased aggregate number in the dorsolateral substantia nigra, as well as the surface covered by aggregates in the dorsolateral, ventrolateral and ventromedial substantia nigra (*p<0.05, 4x2 repeated measures ANOVA, Holm-Sidak), mean+SEM.
