- 4) Supplementary References

Fig S1

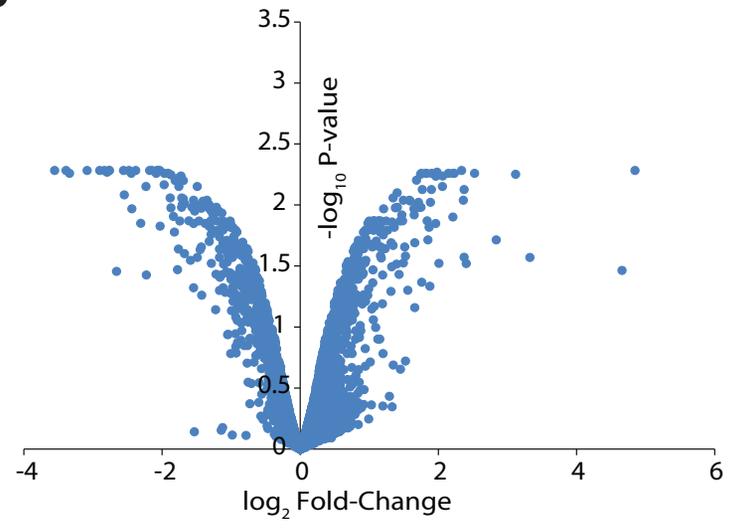

**A**

$\Delta exoR$  vs. wild-type

**B**

$\Delta exoA\Delta exoR$  vs.  $\Delta exoA$

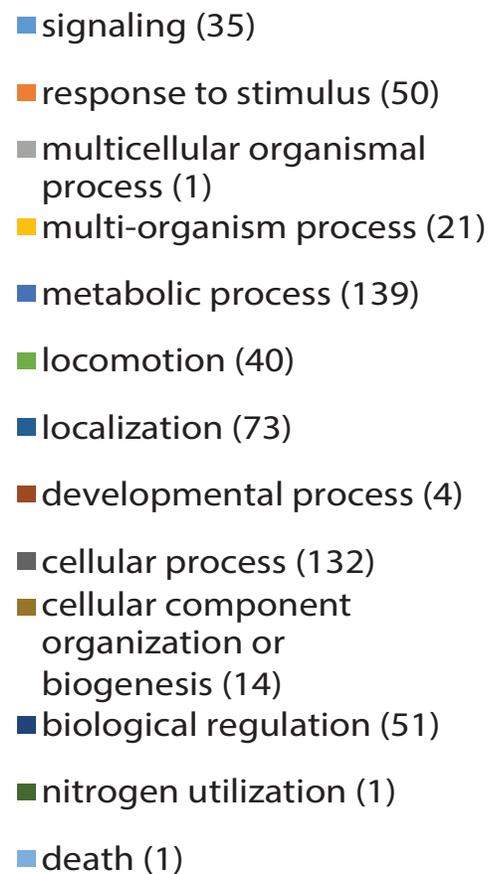

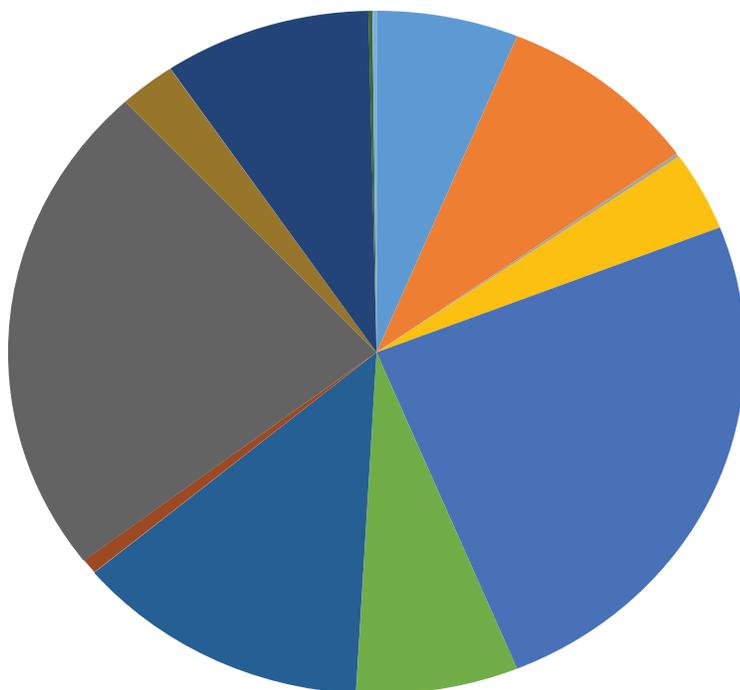

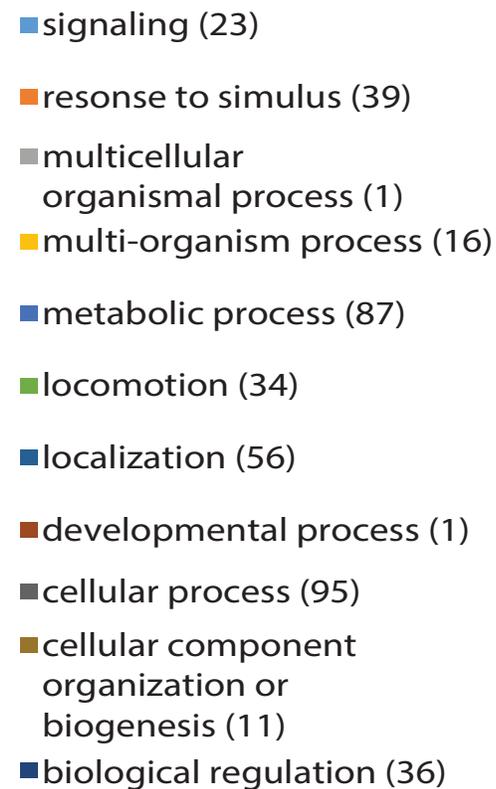

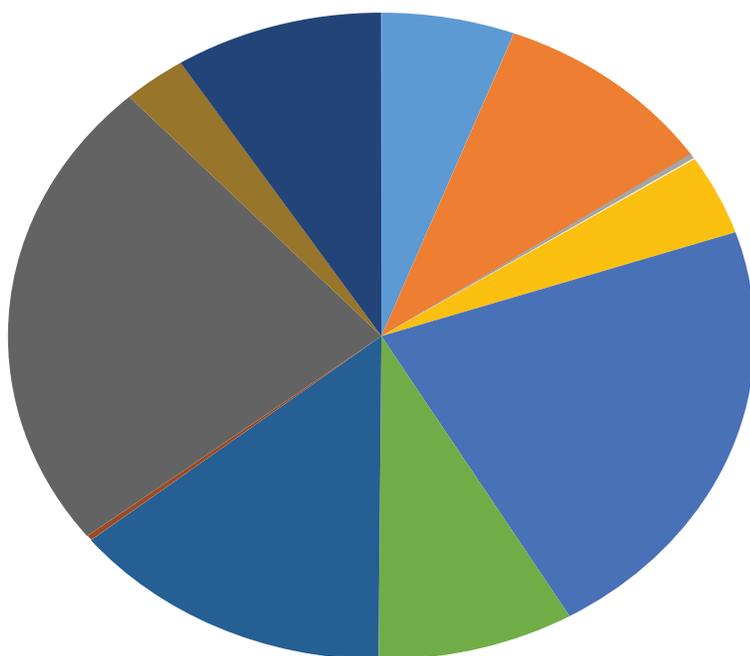

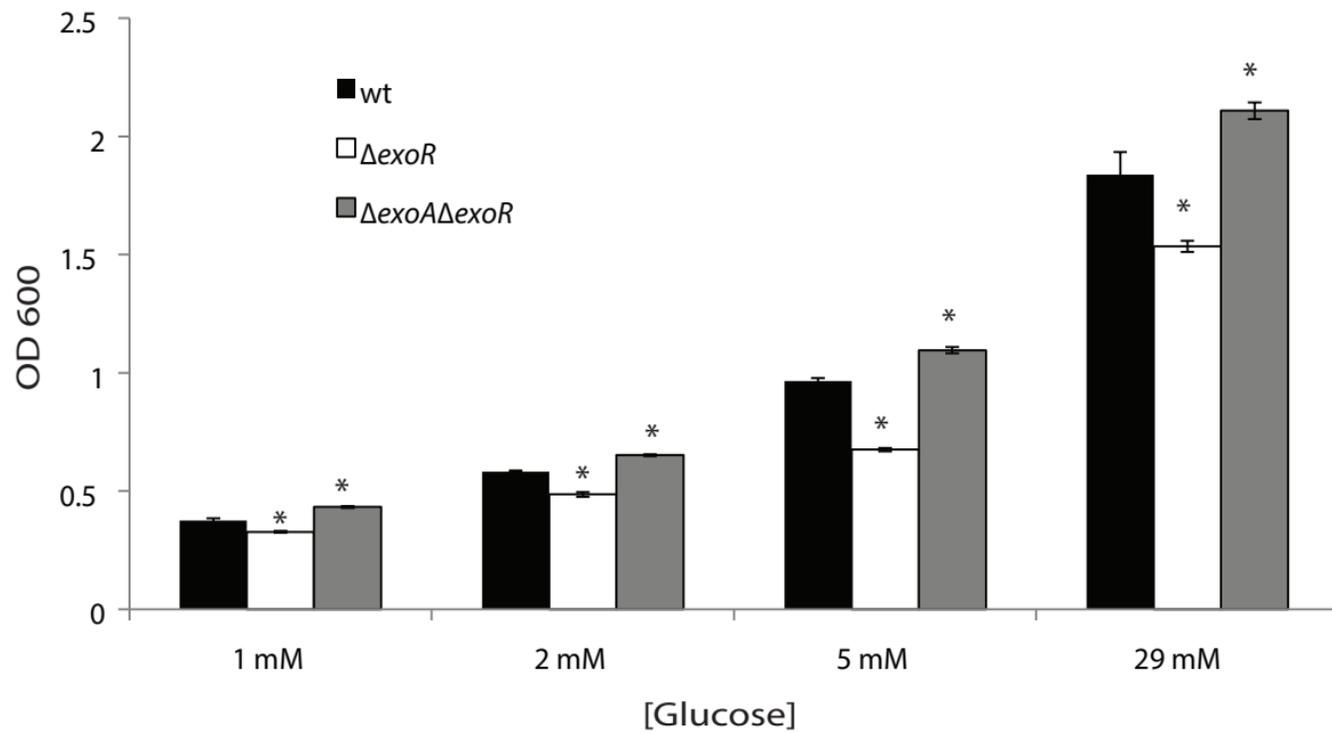

**A***ΔexoR* vs. wild-type**B***ΔexoAΔexoR* vs. *ΔexoA*

Fig S3

**Supplemental Figure 1:** Volcano plots of each microarray analysis. (A),  $\Delta exoR$  versus wild-type, (B),  $\Delta exoA\Delta exoR$  versus  $\Delta exoA$ . Each point represents a single gene. The cut-off values for significant expression changes were a P-value of  $<0.05$  and an M-value of  $\pm 0.5$ .

**Supplemental Figure 2: GO Analysis of ExoR regulon by Blast2GO** Fasta files containing nucleotide sequences corresponding to Atu numbers of significantly regulated genes were run through the Blast2GO software. The fasta file was first run through BLAST step, then through the GO-Mapping, Annotation, and InterPro Scan steps to generate a set of annotated genes. Not every sequence entered into the software was assigned to a GO group, and many sequences were assigned to more than one group, so the total number of GO-annotated genes does not correspond directly with the number of sequences in the fasta file. A combined graph was generated in the Cellular Processes category, and the pie chart represents Level 2 organization of the GO IDs in this category.

**Supplemental Figure 3: Succinoglycan Over-production Leads to Decreased Growth Yields** Strains were grown in minimal media (ATGN) with a range of glucose concentrations for 71 hours to determine growth yield differences. Asterisks denote a significant difference of the  $OD_{600}$  compared to wild-type at each time point ( $p < 0.05$ ). Error bars represent standard deviation of the mean of three biological replicates.

**Table S1: strains and plasmids used in this study**

Strain/plasmid designation	Relevant features	Reference
<i>E. coli</i>		
DH5 $\alpha$ / $\lambda$ pir	$\lambda$ pir; cloning strain	(1)
TOP10 F'	Cloning strain	Invitrogen
S17-1/ $\lambda$ pir	$\lambda$ pir ; Tra <sup>+</sup> , cloning host	(2)
S17-1/ $\lambda$ pir (pFD1)	<i>Himar1</i> conjugal donor	(3)
<b><i>Agrobacterium tumefaciens</i></b>		
C58	Nopaline type strain; pTiC58; pAtC58	(4)
PMM1	$\Delta$ exoR (Atu1715)	(5)

Capital letter sequences anneal to their target sequences; lower case letters are sequences that have been engineered into the oligonucleotide but do not anneal with the genomic target sequence. Italicized sequences are complimentary to each other between paired primers. Restriction endonuclease cleavage sites are noted in parentheses.

**All genes identified in two microarray experiments:  $\Delta$ exoR vs. wild-type and  $\Delta$ exoA  $\Delta$ exoR vs.  $\Delta$ exoA including agreement with acid regulon of Yuan, *et al. J. Bact.* 2008**
