Abbreviations: EA = effect allele, NEA = non-effect allele, EAF = Effect allele frequency, P = P-value, TBFS = transcription factor binding site

- a) Variant yielded by conditional analysis on rs6548238.
- b) In perfect LD with reported variant rs7596758.
- c) ENCODE experiment scores have values from 0 to 1000. Higher ChipSeq binding scores indicate a higher potential evidence for transcription factor binding. In case multiple TBFS were found, only the site with the highest score was selected.
