

Figure S1. Knockdown efficiency of SAMHD1 in THP-1_{KD-SAMHD1} cells.

2 X 10⁵ cells were differentiated for 24h with 33 ng/ml PMA and analyzed for SAMHD1 expression on an immunoblot using anti-SAMHD1 monoclonal antibody (Origene) and secondary anti-mouse HRP (Sigma). Bands were visualized and quantified on a Li-cor phosphorimager. The SAMHD1 to GAPDH ratio was determined as 100 X (SAMHD1 signal) / (GAPDH signal).
