

FIG S1 SEM analyses of *Vibrio salmonicida* LFI1238 biofilms after 3 and 6 days growth. The biofilms were grown in SWT medium at 4°C before being fixated. The pictures to the left show the biofilm at 130 x magnification (bar size 100 mm), and the pictures to the right show the biofilm at 2000 x magnification (bar size 5 mm).

TABLE S1 Plasmid profiles of *Vibrio salmonicida* LFI1238 and the wild type strains included in the study ^a

^a The plasmid profiles of the ten wild type isolates were analyzed by Sørum and co-workers (Sørum et al., J. Clin. Microbiol. 26:1679-1683, 1988). One isolate shows the same plasmid profile as LFI1238 (Hjerde et al., BMC Genomics 9:616, 2008), whereas seven isolates have plasmid profiles belonging to the four main groups A to D. The two remaining isolates show plasmid profiles not belonging to either group.
