

Supplementary figure 7. Lysyl oxidase (LOX) activity and CD44 expression in iPMT cells and macrophages upon induction of CTSB expression. *a*, LOX activity detected by enzymatic substrate conversion releasing hydrogen peroxide upon induction of CTSB expression by doxycycline (1 μ M) in iPMT cells and *b*, in immortalized macrophages. *d*, FACS analysis of CD44 expression upon induction of CTSB expression by doxycycline (1 μ M) in iPMT cells and *e*, in immortalized macrophages.
