Supplemental Table 1. Roughly a third of detectable exclusively cytoplasmic proteins (117/395) became significantly more insoluble following a two hour heat stress at 42°C (95% confidence level, Z-score ≥ 1.96).

Systematic Name	Gene Name

YGR094W	VAS1
YGR234W	YHB1

Supplemental Table 2. Among the 50 cytoplasmic proteins that co-immunoprecipitate with Hsp82-GFP, a significant number (21) are also known to form intracellular foci (hypergeometric $p \leq 10^{-3}$ for proteins identified at the 97.7% confidence level, Z-score ≥ 2).
