# Supplementary Figures

Supplementary Figure 1. Distribution of raw ddCq values based on blood group. Y-axes are raw ddCq values of protein level abundances split on A/AB/B and O blood group assignment. Thick horizontal lines depicts the median, the boxes depicts the first and third quartiles.

Supplementary Figure 2. Correlation between age and number of medications listed. Y-axis denotes the number of medications an individual is currently taking and the X-axis the age of the individuals.
