

Natural Product Studies of US Endangered Plants: Volatile Components of  
*Lindera melissifolia* (Lauraceae) Repel Mosquitoes and Ticks

Joonseok Oh , John J. Bowling , John F. Carroll, Betul Demirci, K.Hüsünü Can Başer, Theodor D. Leininger, Ulrich R. Bernier, Mark T. Hamann

Supplementary Data

<b>Fig. S1. Photos of <i>Lindera melissifolia</i> in the field under canopy, its unripe drupes, inflorescence and ripened drupes used for the volatile oil extraction .....</b>	<b>2</b>
<b>Fig. S2. Herbarium voucher deposited at the Southern Hardwoods Laboratory Sharkey County, Mississippi (U.S.) .....</b>	<b>3</b>
<b>Fig. S3. gHSQC spectrum of the pondberry essential oil and identified major components of the oil (CDCl<sub>3</sub>). (i) (E)-β-ocimene, (ii) sabinene, (iii) α-phellandrene, (iv) limonene, (v) p-cymene, (vi) myrcene .....</b>	<b>4</b>
<b>Fig. S4. <sup>13</sup>C NMR and GC-MS spectrum of <i>trans</i>-sabinene hydrate.....</b>	<b>5</b>
<b>Table S1 Mosquito repellency of <i>Lindera melissifolia</i> essential oil and hexanes extract .....</b>	<b>6</b>
<b>Table S2 Mosquito repellency minimum effective dose of the fractions generated by fractional freezing .....</b>	<b>6</b>
<b>Table S3 Components identified in the collected essential oil fractions generated by fractional freezing .....</b>	<b>7</b>

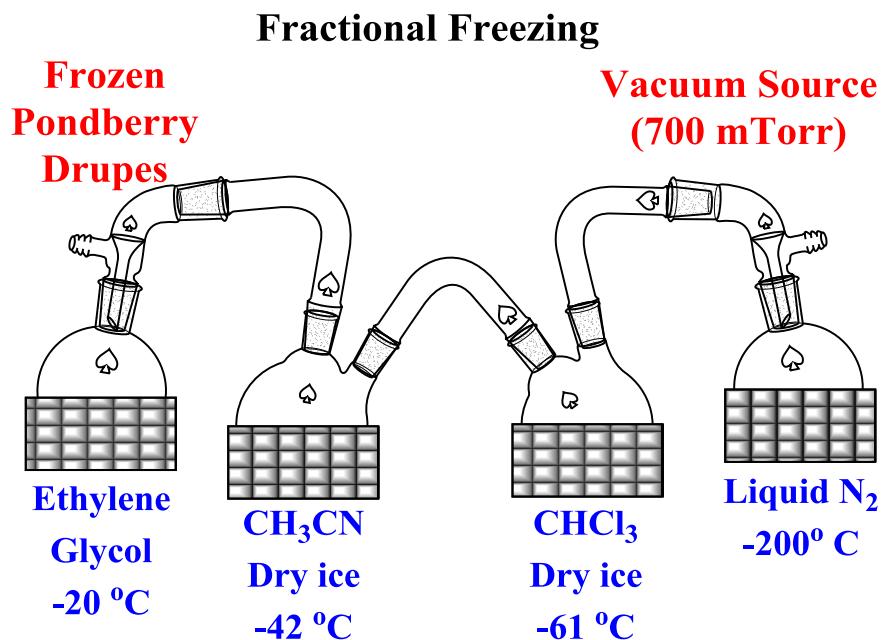

**Fig. S2. Herbarium voucher deposited at the Southern Hardwoods Laboratory Sharkey County, Mississippi (U.S.)**

**Fig. S3.** gHSQC spectrum of the pondberry essential oil and identified major components of the oil ( $\text{CDCl}_3$ ).  
(i) (*E*)- $\beta$ -ocimene, (ii) sabinene, (iii)  $\alpha$ -phellandrene, (iv) limonene, (v) *p*-cymene, (vi) myrcene

**Fig. S4.**  $^{13}\text{C}$  NMR and GC-MS spectrum of *trans*-sabinene hydrate

**Fig. S5.** Schematic diagrams of the fractional freezing apparatus to fractionate pondberry essential oil

**Table S1**

Mosquito (*Ae. aegypti*) repellency of *Lindera melissifolia* essential oil (Sample A) and hexanes extract (Sample B). The essential oil showed moderate mosquito repellency but the hexanes extract was proven to be ineffective.

Sample	MED <sup>a</sup>	SD <sup>b</sup>	SE <sup>c</sup>	HDA <sup>d</sup>
A	0.5	0.217	0.125	1.5
B	-	-	-	0.75
DEET <sup>e</sup>	0.023	0.000	0.000	1.5

<sup>a</sup> Minimum effective dose (mg/cm<sup>2</sup>). <sup>b</sup> Standard deviation. <sup>c</sup> Standard error. <sup>d</sup> Highest dose available (mg/cm<sup>2</sup>). <sup>e</sup> *N,N*-diethyl-3-methylbenzamide.

**Table S2**

Mosquito (*Ae. aegypti*) repellency minimum effective dose (MED, mg/cm<sup>2</sup>) of the fractions generated by fractional freezing. The fractional freezing can enrich some mosquito repellent components of *Lindera melissifolia* essential based on the observation that the minimum effective doses of -20 and -40 °C were lowered than the one of the pondberry crude oil.

Fraction	MED	SD <sup>a</sup>	SE <sup>b</sup>	HAD <sup>c</sup>
-20 °C	0.187	0.000	0.000	0.375
-42 °C	0.25	0.109	0.063	0.75
-61 °C	0.469	0.398	0.23	0.75
-200 °C	-	-	-	0.75
DEET <sup>d</sup>	0.013	0.009	0.005	0.75

<sup>a</sup> Standard deviation. <sup>b</sup> Standard error. <sup>c</sup> Highest dose available (mg/cm<sup>2</sup>). <sup>d</sup> *N,N*-diethyl-3-methylbenzamide.

**Table S3**

Components identified in the collected essential oil fractions generated by fractional freezing

Components	Code	-20 °C %	-42 °C %	-61 °C %	-200 °C %
α-pinene	A	3.20	7.27	7.13	
α-thujene	B	1.52	5.46	3.47	
camphene	C	0.45			
β-pinene	D	0.28	0.32	2.67	2.87
sabinene	E	9.23	61.42	62.89	70.93
myrcene	F	0.43	1.30		
α-phellandrene	G	0.53	6.66	4.91	2.70
α-terpinene	H	0.47	0.50	4.56	2.16
limonene	I		3.87	1.10	Tr
1,8-cineole	J	8.78	1.39	0.85	2.50
(E)-β-ocimene	K	3.53		1.21	1.76
γ-terpinene	L	1.64	11.04	7.14	4.71
p-cymene	M	3.30	2.47	0.76	1.77
2-methyl butyl 2-methyl butyrate	N		0.48		
alloocimene	O		0.42		
terpinolene	P	0.52	0.87	1.18	
citronellal	Q	0.54	0.50		
linalool	R	2.39			
geraniol	S	0.55			
bornyl acetate	T	1.90	0.22		
terpinen-4-ol	U	28.90	0.65		
α-terpinyl acetate	V	1.87			
β-caryophyllene	W	13.80	1.69		
α-humulene	X	0.90	0.08		
germacrene D	Y	2.30	0.33		
pregeijerene B	Z		0.12		
sabina ketone	AA	0.30			
citronellyl acetate	AB	3.10	0.29		
α-copanene	AC	0.37			
geranyl acetate	AD	1.22			
β-elemene	AE	0.61	0.05		
citronellol	AF	8.34	0.17		
caryophyllene oxide	AG	4.21			

% Calculated from areas of each peaks corresponding to each components on GC chromatogram.
