

Figure S4. Prophylactic treatment of colistin does not prolong life span on Gram-positive pathogen *E. faecalis* and *S. aureus*. Wild-type N2 L4 animals treated with or without 20 μ g/ml colistin for 24 hours were transferred to modified NGM plates containing (A) *E. faecalis* or (B) *S. aureus* and scored for survival. Shown are representative assays of two independent experiments. N=60 animals per treatment.
