

Key	
Let-7 Family	Blue
Chromosome 22 Cluster	Red
Chromosome X Cluster	Green
Other known miRNAs	Purple

Supplementary Figure 8 | Conservation of miRNAs across four anthropoid primates. Marmoset miRNAs were mapped on the marmoset (calJac3) genome and evaluated against four anthropoid primates including Human (hg18), Chimpanzee (panTro2), Orangutan (ponAbe2) and Rhesus macaque (rhema2). The fraction of marmoset miRNAs that are perfectly conserved in different primates are plotted. Total number of miRNAs in each group are Let-7 family (8), Chr. 22 cluster (71), Chr. X cluster (22), All others (673).
