

Supplementary Data

SUPPLEMENTARY FIG. S1. Expression of (A) chondrogenic and (B) osteogenic genes among scaffolds cultured in growth, chondrogenic, or osteogenic differentiation media after 21 days. Pure chondrogenic media elicited significant upregulation of *COL2A1* and *ACAN* in low-density scaffolds, while pure osteogenic media supported significant upregulation of *ALP* and *RUNX2* in both high-density and mineralized scaffolds. *Significantly increased compared to growth media group for that scaffold type. Data reproduced from reference.³⁷
