

Supplementary Figure S2. Specificity of expression of ORs in mDA neurons. Specificity of expression of *Olf287*, *Olf316* and *Olf558* transcripts (green) by ISH in A9 and A10 DA neurons is verified with control sense probes. DA neurons in SN are visualized by anti-TH immuno-staining (red). Nuclei are shown in blue (DAPI). Scale bars indicate 20 μm. Data are representative of n=3 independent experiments.
