

Hollenbaugh et al., dNTP Pool Modulation Dynamics by SAMHD1 Protein in Monocyte-derived Macrophages

Additional file 2

**Additional file 2: Analysis of RNR subunits.** MDMs were treated with VLP for 24 h and then processed for cellular lysates. Western blot analysis was performed using 25  $\mu$ g total protein to detect the major subunit, R1 (Abcam), or the small subunits R2 and p53R2 (Santa Cruz). No significant changes in RNR expression levels were detected.
