Online Resource 9 Variation grouping based on Tukey's test. The probability level for all statistical analyses was $p < 0.01$ and $\alpha = 0.05$. RA, RM, RE – regenerants derived from anther cultures, shed-microspores cultures and immature zygotic embryo cultures, respectively.

Variation types		Tukey's grouping			
		RA	RM	RE	All regenerants
Uncorrected for complex variation	SV	C	B	C	C
	DMV	B	A	B	B
	DNMV	A	A	A	A
		RA	RM	RE	All regenerants
Corrected for complex variation	CSV	C	B	C	C
	CDMV	B	A	B	B
	CDNMV	A	A	A	A
