Table of contents

Figure S1. The -4 charge envelopes showing isotopic resolution among various peaks generated from AlkB repair reactions of a) α -OH-PdG, b) γ -OH-PdG and c) M₁dG within 16-mer oligonucleotides.

Figure S2. Repair of α -OH-PdG-containing 16-mer oligonucleotide by AlkB, focusing on the appearance of peak at 1238.68.

Figure S3. Repair of α -OH-PdG (X) in single- and double-stranded DNA (ssDNA and dsDNA) by AlkB.

Figure S4. Repair of γ -OH-PdG (X) in single- and double-stranded DNA (ssDNA and dsDNA) by AlkB.

Figure S5. Repair of M₁dG (X) in single- and double-stranded DNA (ssDNA and dsDNA) by AlkB.

Figure S6. Reduction of α -OH-PdG by NaBH₄.

Figure S7. Reduction of γ -OH-PdG by NaBH₄.

Figure S8. Reduction of M₁dG by NaBH₄.

Figure S9. Effect of pH on reduction of α -OH-PdG by NaBH₄.

Figure S10. MS/MS fragmentation spectrum of 16mer containing α -OH-PdG (structures **1a** & **1b**, unreacted starting material) in the incubation of α -OH-PdG with AlkB. The blue diamond marks the parent ion.

Figure S11. MS/MS fragmentation spectrum of 16mer containing dehydrated form of α -OH-PdG (structure **2**) in the incubation of α -OH-PdG with AlkB. The blue diamond marks the parent ion.

Figure S12. MS/MS fragmentation spectrum of 16mer containing γ -OH-PdG (structures **5a** & **5b**, unreacted starting material) in the reaction of γ -OH-PdG with AlkB. The blue diamond marks the parent ion.

Figure S13. MS/MS fragmentation spectrum of 16mer containing G (structure **6**, repair product) in the incubation of γ -OH-PdG with AlkB. The blue diamond marks the parent ion.

Figure S14. MS/MS fragmentation spectrum of 16mer containing oxidized γ -OH-PdG (structures **3a** & **3b**) in the incubation of γ -HOPG with AlkB. The blue diamond marks the parent ion.

Figure S15. MS/MS fragmentation spectrum of 16mer containing M₁dG (structure **7**, unreacted starting material) in the incubation of M₁dG with AlkB. The blue diamond marks the parent ion.

Figure S16. MS/MS fragmentation spectrum of 16mer containing G (structure **6**) in the incubation of M₁dG with AlkB. The blue diamond marks the parent ion.

Figure S17. MS/MS fragmentation spectrum of 16mer containing oxidized M₁dG (structure **8**, epoxide) in the incubation of M₁dG with AlkB. The blue diamond marks the parent ion.

Figure S18. Predicted collision-induced dissociation (CID) fragmentation pattern of the 16mer oligonucleotide. X denotes the lesion or repair reaction intermediate or product. The *m/z* theoretical values of the CID fragments, calculated using Mongo Oligo Mass Calculator v2.06 (<http://library.med.utah.edu/masspec/mongo.htm>) are shown in Tables S2-S9.

Table S1. Calculated and observed monoisotopic molecular weight of oligonucleotides containing lesions, intermediates, and their PFBHA derivatives. Structures are depicted in Figure 3 in the main text

Table S2. Predicted and observed *m/z* for MS/MS fragmentation patterns displayed in Figure S10 of α -OH-PdG (structures **1a & 1b**) 16mer in the incubation of α -OH-PdG with AlkB. Predicted CID fragments are shown in Figure S10.

Table S3. Predicted and observed *m/z* for MS/MS fragmentation patterns displayed in Figure S11 of dehydrated α -OH-PdG (structure **2**) 16mer in the incubation of α -OH-PdG with AlkB. Predicted CID fragments are shown in Figure S11.

Table S4. Predicted and observed *m/z* for MS/MS fragmentation patterns displayed in Figure S12 of γ -OH-PdG (structures **5a & 5b**) 16mer in the incubation of γ -OH-PdG with AlkB. Predicted CID fragments are shown in Figure S12.

Table S5. Predicted and observed *m/z* for MS/MS fragmentation patterns displayed in Figure S13 of G (structure **6**) 16mer in the incubation of γ -OH-PdG with AlkB. Predicted CID fragments are shown in Figure S13.

Table S6. Predicted and observed *m/z* for MS/MS fragmentation patterns displayed in Figure S14 of oxidized γ -OH-PdG (structures **3a & 3b**) 16mer in the incubation of γ -OH-PdG with AlkB. Predicted CID fragments are shown in Figure S14.

Table S7. Predicted and observed *m/z* for MS/MS fragmentation patterns displayed in Figure S15 of M₁dG (structure **7**) 16mer in the incubation of M₁dG with AlkB. Predicted CID fragments are shown in Figure S15.

Table S8. Predicted and observed *m/z* for MS/MS fragmentation patterns displayed in Figure S16 of G (structure **6**) 16mer in the incubation of M₁dG with AlkB. Predicted CID fragments are shown in Figure S16.

Table S9. Predicted and observed *m/z* for MS/MS fragmentation patterns displayed in Figure S17 of M₁dG (structure **8**) 16mer in the incubation of M₁dG with AlkB. Predicted CID fragments are shown in Figure S17.

Figure S1. The -4 charge envelopes showing isotopic resolution among various peaks generated from AlkB repair reactions of a) α -OH-PdG, b) γ -OH-PdG and c) M_1 dG within 16-mer oligonucleotides.

Figure S2. Repair of α -OH-PdG-containing 16-mer oligonucleotide by AlkB, focusing on the appearance of peak at 1238.68.

Figure S3. Repair of α -OH-PdG (X) in single- and double-stranded DNA (ssDNA and dsDNA) by AlkB.

Figure S4. Repair of γ -OH-PdG (X) in single- and double-stranded DNA (ssDNA and dsDNA) by AlkB.

Figure S5. Repair of M₁dG (X) in single- and double-stranded DNA (ssDNA and dsDNA) by AlkB.

Figure S6. Reduction of α -OH-PdG by NaBH₄.

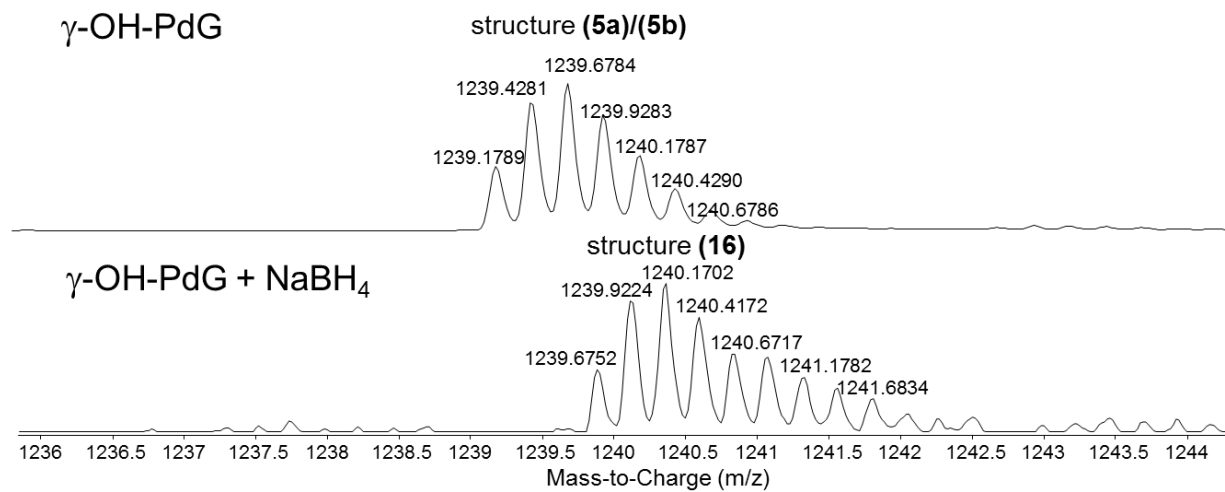

Figure S7. Reduction of γ -OH-PdG by NaBH₄.

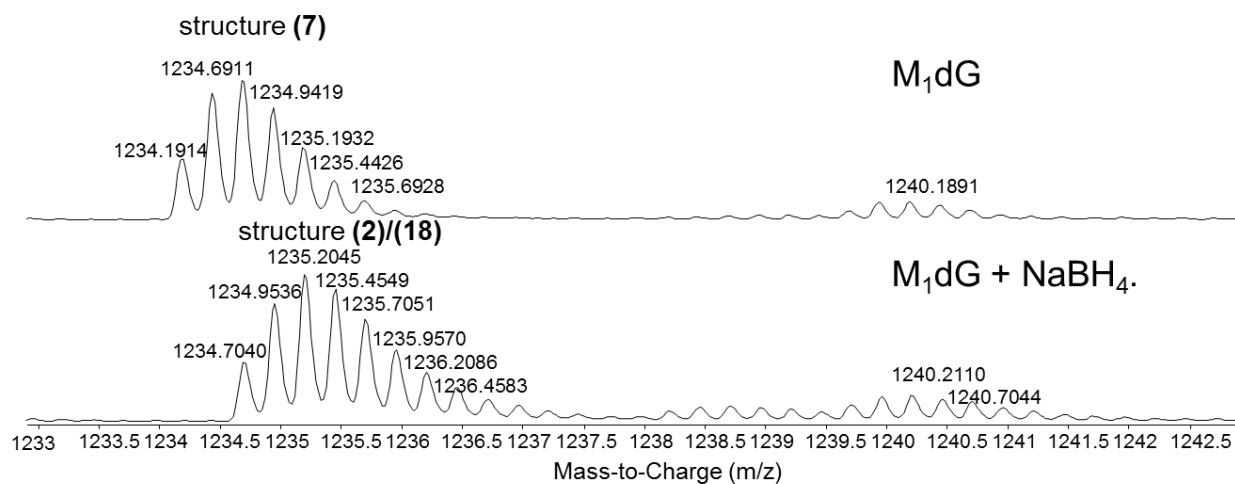

Figure S8. Reduction of M₁dG by NaBH₄.

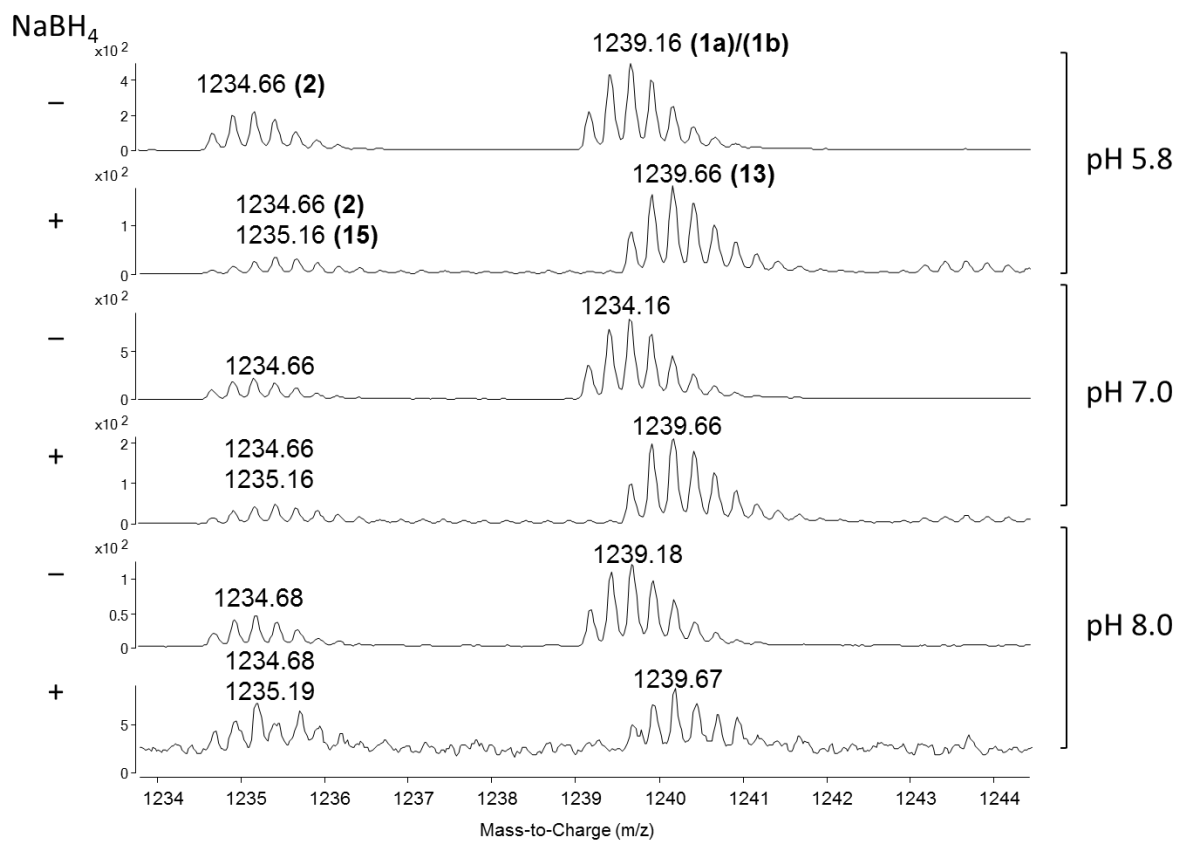

Figure S9. Effect of pH on reduction of α -OH-PdG by NaBH₄.

Figure S10. MS/MS fragmentation spectrum of 16mer containing α -OH-PdG (structures **1a** & **1b**, unreacted starting material) in the incubation of α -OH-PdG with AlkB. The blue diamond marks the parent ion.

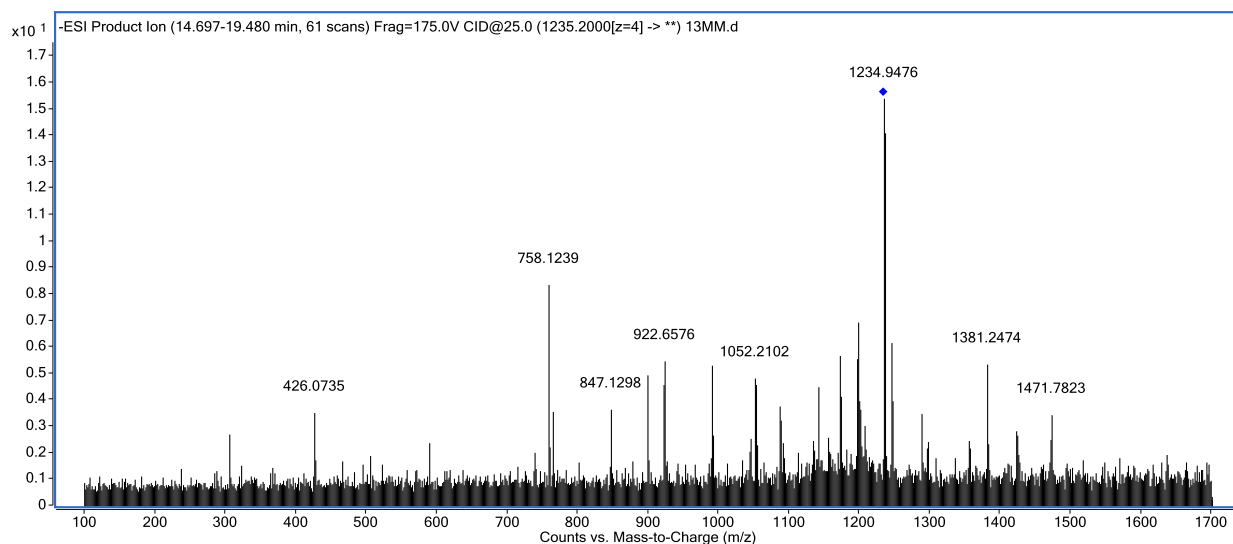

Figure S11. MS/MS fragmentation spectrum of 16mer containing dehydrated form of α -OH-PdG (structure **2**) in the incubation of α -OH-PdG with AlkB. The blue diamond marks the parent ion.

Figure S12. MS/MS fragmentation spectrum of 16mer containing γ -OH-PdG (structures **5a** & **5b**, unreacted starting material) in the reaction of γ -OH-PdG with AlkB. The blue diamond marks the parent ion.

Figure S13. MS/MS fragmentation spectrum of 16mer containing G (structure **6**, repair product) in the incubation of γ -OH-PdG with AlkB. The blue diamond marks the parent ion.

Figure S14. MS/MS fragmentation spectrum of 16mer containing oxidized γ -OH-PdG (structures **3a** & **3b**) in the incubation of γ -HOPG with AlkB. The blue diamond marks the parent ion.

Figure S15. MS/MS fragmentation spectrum of 16mer containing M_1dG (structure **7**, unreacted starting material) in the incubation of M_1dG with AlkB. The blue diamond marks the parent ion.

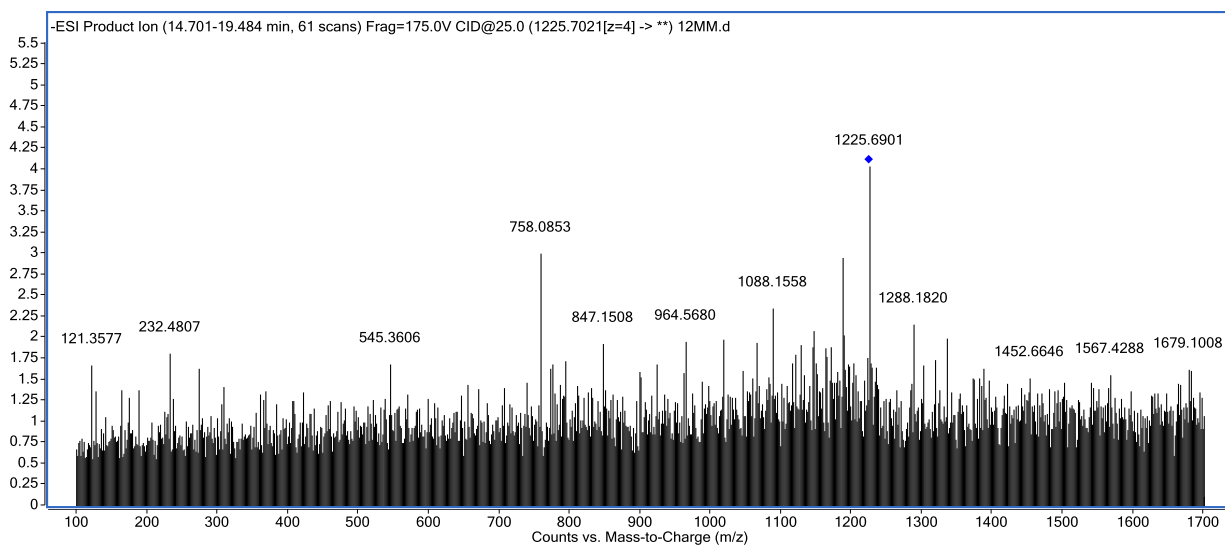

Figure S16. MS/MS fragmentation spectrum of 16mer containing G (structure 6) in the incubation of M₁dG with AlkB. The blue diamond marks the parent ion.

Figure S17. MS/MS fragmentation spectrum of 16mer containing oxidized M1G (structure 8, epoxide) in the incubation of M₁dG with AlkB. The blue diamond marks the parent ion.

Figure S18. Predicted collision-induced dissociation (CID) fragmentation pattern of the 16mer oligonucleotide. X denotes the lesion or repair reaction intermediate or product. The m/z theoretical values of the CID fragments, calculated using Mongo Oligo Mass Calculator v2.06 (<http://library.med.utah.edu/masspec/mongo.htm>) are shown in Tables S2-S9.

Figure S19. Showing distances between carbons (attached to N1- and N^2 - positions) of M_1dG from the Fe in the active site of AlkB. The distances between the carbons attached to the N1 and the N^2 - positions are approximately similar (shown in red). These distances are expected to be similar for other two exocyclic dG lesions (α -OH-PdG and γ -OH-PdG), because similar to M_1dG both α -OH-PdG and γ -OH-PdG are 3-carbon bridge exocyclic guanine adducts that are attached to the N1 and the N^2 -positions of dG.

Table S1. Calculated and observed monoisotopic molecular weight of oligonucleotides containing lesions, intermediates, and their PFBHA derivatives. Structures are depicted in Figure 3 in the main text.

Lesion, base or intermediate	MW (calculated) of neutral species	<i>m/z</i> (calculated) -4 charge monoisotopic peak	<i>m/z</i> (observed) -4 charge monoisotopic peak
α -OH-PdG (1b)	4960.88	1239.21	1239.20/21
α -OH-PdG – H ₂ O (2)	4942.87	1234.71	1234.70/71
(1b) + PFBHA	5155.89	1287.97	1287.98
γ -OH-PdG (5b)	4960.88	1239.21	1239.21
(5b) + PFBHA	5155.89	1287.97	1287.97
M ₁ dG (7)	4940.86	1234.21	1234.20
(11b) or (12b) + PFBHA	5153.88	1287.46	1287.47

Table S2. Predicted and observed m/z for MS/MS fragmentation patterns displayed in Figure S10 of α -OH-PdG (structures **1a** & **1b**) 16mer in the incubation of α -OH-PdG with AlkB. Predicted CID fragments are shown in Figure S10.

a15-C	-4	1120.679	1120.636

Table S9. Predicted and observed m/z for MS/MS fragmentation patterns displayed in Figure S17 of M₁dG (structure **8**) 16mer in the incubation of M₁dG with AlkB. Predicted CID fragments are shown in Figure S17.

Fragment	Charge	Theoretical m/z	Observed m/z
W1	-1	306.048	306.053
W2	-1	595.094	595.006
W3	-1	899.139	899.135
W4	-2	613.592	613.172
W5	-2	758.115	758.086
W6	-2	922.641	922.628
W7	-2	1087.167	1087.108
W8	-2	1278.255	1278.267
W9	-2	1430.353	1430.448
W10	-3	1049.628	1049.908
W11	-3	1146.023	1146.176
W12	-3	1250.426	1250.271
W14	-3	1464.566	1464.267
W15	-4	1176.475	1176.429
a2-A	-1	426.08	426.073
