

Supplemental Figure 1: Generation of Crf-1/p41-specific CD4⁺ T cell clones. CD4⁺p41⁺ T clones were expanded from CD154⁺ T cells. After 14 days p41-tetramer⁺ T cells were enriched using MACS prior cloning by limiting dilution. Dotplots show % tetramer⁺ CD4⁺ T cells in the peripheral blood (day 0), after 14 days of expansion, and after cloning.
