

Supplemental Figure 3: LAP, ICOS, and Foxp3 expression on CMV-specific T cell clones. (A) Histograms show expression of LAP, ICOS, and Foxp3 by one T cell clone specific for the CMV-peptide pool (donor 1) and CMV₂₈₃₋₂₉₇ peptide (donor 2) after 24h of antigen-specific reactivation (solid lines; dashed lines: isotype controls). (B) The diagram summarizes the percentage \pm SD of LAP, ICOS, and Foxp3 expressing T cell clones (n=3 per donor).
