

Supplemental Table 1: Cytokine production by p41⁺ CD4 T cell clones

Donor	Clone #	Cytokine production (pg/ml)			
		IL-10	IFN- γ	IL-4	
1	IL-10^{low} ¹⁾	7H2	113	2840	2
		8H10	63	1539	5
		7A8	370	2762	2
2		3D2	391	3118	327
		9c5	718	3525	1
		3D4	640	4339	1
3		5G5	50	854	1
		10A9	4	750	131
		10H9	86	818	2
1	IL-10^{high}	5H1	1072	93	1
		10F3	1512	527	17
		5B12	1734	823	66
2		1H10	1585	2762	0
		9H11	1390	3268	13
		3F2	1122	3017	6
3		4G2	1436	997	42
		8H9	1157	1624	0

p41⁺ CD4⁺ T cell clones were restimulated with peptide-pulsed DC for 48h.

Thereafter, production of the cytokines IL-10, IFN- γ , and IL-4 was determined from culture supernatant by CBA. ¹⁾ p41⁺ T cell clones were subdivided by low and high IL-10-to-IFN- γ production.
