Figure S1   Coiled-coil prediction of Corolla by the COILS program. Corolla is predicted to contain three coiled-coil regions based on the COILS program (LUPAS *et al.* 1991). These coiled-coil domains span the first two-thirds of the protein. Of note, the Eukaryotic Linear Motif (ELM) program (http://elm.eu.org/) identified only one coiled-coil domain in Corolla (aa 105–135) (DINKEL *et al.* 2014).
